Extinct Species Of The World 40000 Years Of Conflict

Adrah N. Parafiniuk, Zachary A. Smith

Extinct Species Of The World 40000 Years Of Conflict:

The Sixth Extinction Terry Glavin, 2025-08-22 The Sixth Extinction is a haunting account of the age in which we live Ecologists are calling it the Sixth Great Extinction and the world isn't losing just its ecological legacy also vanishing is a vast human legacy of languages and our ways of living seeing and knowing Terry Glavin confirms that we are in the midst of a nearly unprecedented catastrophic vanishing of animals plants and human cultures He argues that the language of environmentalism is inadequate in describing the unraveling of the vast system in which all these extinctions are actually related And he writes that we're no longer gaining knowledge with every generation We're losing it In the face of what he describes as a dark and gathering sameness upon the Earth Glavin embarks on a global journey to meet the very things we're losing a distinct species every ten minutes a unique vegetable variety every six hours an entire language every two weeks and on the way encounters some of the world's wonderful rare things a human sized salmon in Russia a mysterious Sino Tibetan song language a Malayan tiger the last of its kind and a strange tomato that tastes just like black cherry ice cream And he finds hope in the most unlikely places a macaw roost in Costa Rica a small village in Ireland a relic community of Norse whalers in the North Atlantic the vault beneath the Royal Botanical Garden at Kew and the throne room of the Angh of Longwa in the eastern Himalayas A fresh narrative take on the usual doom and gloom environmentalism The Sixth Extinction draws upon zoology biology ecology anthropology and mythology to share the joys hidden within the long human struggle to conserve the world's living things Here we find hope in what's left the absolute and stunning beauty in the Earth's last cultures and creatures *The Publishers Weekly*, 1990 **Beacham's Guide to Environmental Issues & Sources** Walton Beacham, 1993 *Evolution and the Human-Animal Drive to Conflict* Jorge A. Colombo, 2023-07-31 Evolution and the Human Animal Drive to Conflict examines how fundamental universal animal drives such as dominance prevalence survival kinship and profit greed advantage whether of material or social nature provide the basis for the evolutionary trap that promotes the unstable conflictive dominant prone individual and group human behaviours Examining this behavioural tension this book argues that while these innate features set up behaviours that lean towards aggression influenced by social inequalities the means implemented to defuse them resort to emotional and intellectual strategies that sponsor fanaticism and often reproduce the very same behaviours they intend to defuse In addressing these concerns the book argues that we should enhance our resources to promote solidarity accept cultural differences deter expansionist and uncontrolled profit drives and achieve collective access towards knowledge and progress in living conditions This entails promoting the redistribution of resources and creative labour access and avoiding policies that generate a fragmented world with collective and individual development disparities that invite and encourage dominance behaviours This resource redistribution asserts that it is necessary to reformulate the global set of human priorities towards increased access to better living conditions cognitive enhancement a more amiable interaction with the ecosystem and non aggressive cultural differences promote

universal access to knowledge and enhance creativity and cultural convivence These behavioural changes entail partial derangement of our ancestral animal drives camouflaged under different cultural profiles until the species succeeds in replacing the dominance of basic animal drives with prosocial collective ones Though it entails a formidable task of confronting financial military and religious powers and cultural inertias human history is also a challenging continuous experience in these domains for the sake of our own self identity and self evaluation we should reject any suggestion of not continuing embracing slowly constructing collective utopias channelled towards improving individual and collective freedom and creativeness This book will interest academics and students in social cognitive and evolutionary psychology the neurosciences palaeoanthropology philosophy and anthropology

Energy Resource Conflict Adrah N. Parafiniuk, Zachary A. Smith, 2025-01-23 Delve into the history of energy resource conflicts their present status and the potential effects of today s energy production decisions on the future of humanity This book examines international and sometimes intranational conflicts over energy resources including ancient empires 20th century wars over oil and the explosive growth of renewable energy The volume begins with a series of chapters tracing the evolution and future implications of energy production and clashes over these vital resources Next readers will discover a collection of essays addressing fascinating yet sometimes contentious facets of the subject including the current limits of renewable energy sources and the role nuclear power should play A collection of 50 encyclopedic entries round out the book providing readers with concise explanations of key concepts and terms Energy resource conflicts have shaped the world we live in After humans settled across the planet growing empires began to compete for resources First they competed for wood then steel and coal The ability to mine these resources and turn them into trains ships and weapons decided which countries would dominate the world Oil became the most important international resource by the turn of the 20th century and has remained so until the present day But as the authors argue humans have the technology to transition from fossil fuels to renewable energy for the vast majority of their energy needs despite corporate fossil fuel interests Using advanced statistics on the use and growth of all major energy sources this book is an excellent source of information on the predicted growth of various forms of energy as well as the inevitable yet not necessarily peaceful transition toward renewable and carbon free energy sources

The Atheist's Bible Geoff Linsley, 2008-07 Did God create the universe If so who created him The Atheist s Bible tackles these complex and important ancient mysteries With the discoveries of modern science author Geoff Linsley offers a new look at the questions most philosophers throughout history have thought unanswerable Mysteries such as Why does the universe exist as it does and When did it come about are thought to be demystified by modern science Mixing scientific knowledge with common sense Linsley answers these questions in an easy to understand dialogue The Atheist s Bible

compiles the case for an atheistic universe in a thorough discussion provides facts that science has gathered about existence and creates a new view of the nature of the universe Linsley searched through scientific discussions of how nature operates through religious wisdom and through topics thought to be paranormal to present the first complete theory regarding the origin and evolution of existence and humanity A collection of several books with individual purposes The Atheist's Bible furthers the understanding of reality and helps to overcome the fear of the unknown Linsley challenges the realm of theism and looks outside of it to explain how the universe functions The depth of research and the volume of information given make this book exceptional Linsley treats faith respectfully and doesn't get into baseless arguments against views that oppose his own This book is well written very informational and entertaining Foreward CLARION Review **The Trouble with**

Human Nature Elizabeth D. Whitaker, 2017-02-03 The Trouble with Human Nature brings together biological and cross cultural evidence to critically examine common preconceptions and challenge popular assumptions about human nature It sets out to counter genetic and evolutionary myths about human variation and behavior drawing on both biological and cultural anthropology as well as from other disciplines including psychology economics and sociology The chapters address the interrelated topics of health and disease gender and other differences and violence and conflict The analysis calls into question the presumed natural foundation for social inequalities and sheds light on both the constraints and possibilities inherent in the human condition This book provides students of human diversity and evolution with an excellent resource to better approach questions relating to human nature It will also be of interest to those taking courses in social cultural and biological anthropology as well as public health medical anthropology sociology gender studies psychology and kinship studies Earth@Risk Jami Hossain, 2017-01-01 One story that you just can't miss the Earth Risk is a book on the story of Earth the life bearing ship going solo in this vast universe as it suffers at the hands of its own children the modern humans The Story is narrated passionately in chapters that cover the beauty and uniqueness of Earth from a cosmic perspective while highlighting its vulnerabilities and the relentless onslaught on its life bearing capability accompanied by the great biodiversity loss and a disquieting line up of innumerable life forms at the unending labyrinth of the extinct The author promises to take his readers on a journey And what a journey it is From the deep space under the shelter of a Milky Way arm to the core of the earth with the heavy matter settled in it From the highest mountains to deep trenches in the oceans the tectonic fault lines the poles and the rainforest Above the crust and below it The author takes you everywhere in a manner that is somewhat reminiscent of the great works of Jules Verne except for the fact that Earth Risk is not a fiction It is in fact a peephole into reality where the main character of the story is this uniquely beautiful planet Earth tormented by its children and standing precariously balanced in the midst of gargantuan destabilizing forces The book is an intriguing attempt by the author to touch base with reality and unveil the oft ignored vulnerability of this planet It is a lucidly written account from a layman perspective well researched in drawing conclusions from scientific and historical facts The author has raised many

questions on the modern lifestyle and civilization Its driving doctrines modern economic theory rampant urbanization industrialization and the shutting down of photosynthesis He writes of grave danger to life on earth at a very fundamental level in the complete loss of genetic pool and of the innumerable threats that humans have created for the life bearing part of this planet the biosphere which is all but skin thin on this planet Hossain calls this part of the earth the life bearing cocoon which faces destruction The book adopts its own characteristic style of narration using words as much as images and pictures to tell the story Is it then surprising that we face a Pandemic like COVID that has put most powerful amongst humans on the backfoot Did we not in the first place push wild life into a corner enabling viruses to jump species As Hossain compellingly puts it It is not just a question of global warming The multiple deteriorating impacts on this planet are rooted in the modern political and socio economic order You may have any number of literary interests but this is one story that you just can't miss

Revelation Through Science James G. Martin, 2016-11-09 Revelation through Science is written for the educated non scientist who may be troubled by apparent conflicts between science and religion Are science and faith incompatible Astronomers physicists and biologists have now shown that the more deeply science probes nature the more it reveals evidence pointing us to God After reviewing concepts from those fields Revelation through Science adds new material from chemistry It describes organic structures that are profoundly vital for life yet too complex for self assembly without some guiding principle It should lift the burden from believers and seekers to realize that science is not the enemy of faith

Natural Resource Conflicts M. Troy Burnett, 2016-09-19 Natural resource and environmental conflicts have long been issues confronting human societies This case based examination of a wide range of natural resource disputes exposes readers to many contemporary examples that offer reasons for both hope and concern The Rwandan genocide the Sudanese civil war and perpetual instability in the Middle East and Africa each of these crises have arguably been instigated and maintained by natural resource disputes China has undertaken a Herculean task to plant hundreds of millions of trees along its margins in an effort to save Beijing from crippling dust storms and halt the expansion of the Gobi desert Will it work and is it worth it These and many other cases of conflict stemming from natural resource or environmental concerns are explained and debated in this up to date examination of contemporary and ongoing topics The book examines conflicts over precious resources and minerals such as diamonds oil water and fisheries as well as the pursuit of lesser known minerals like Coltan and other rare earth elements important resources in our technological age in remote locations such as Greenland and the Congo Each topic contains an overview and two position essays from different authors thereby providing the reader with highly informative and balanced perspectives Reference entries accompany each topic as well helping students to better understand each issue As the world hurtles into the 21st century these natural resource issues are becoming increasingly important with all global citizens having a significant stake in how these conflicts arise and play out

Eating to Extinction Dan Saladino, 2022-02-01 A New York Times Book Review Editors Choice What Saladino finds in his adventures are people with soul deep relationships to their food This is not the decadence or the preciousness we might associate with a word like foodie but a form of reverence Enchanting Molly Young The New York Times Dan Saladino s Eating to Extinction is the prominent broadcaster s pathbreaking tour of the world s vanishing foods and his argument for why they matter now more than ever Over the past several decades globalization has homogenized what we eat and done so ruthlessly The numbers are stark Of the roughly six thousand different plants once consumed by human beings only nine remain major staples today Just three of these rice wheat and corn now provide fifty percent of all our calories Dig deeper and the trends are more worrisome still The source of much of the world s food seeds is mostly in the control of just four corporations Ninety five percent of milk consumed in the

United States comes from a single breed of cow Half of all the world's cheese is made with bacteria or enzymes made by one company And one in four beers drunk around the world is the product of one brewer If it strikes you that everything is starting to taste the same wherever you are in the world you're by no means alone This matters when we lose diversity and foods become endangered we not only risk the loss of traditional foodways but also of flavors smells and textures that may never be experienced again And the consolidation of our food has other steep costs including a lack of resilience in the face of climate change pests and parasites Our food monoculture is a threat to our health and to the planet In *Eating to Extinction* the distinguished BBC food journalist Dan Saladino travels the world to experience and document our most at risk foods before it's too late He tells the fascinating stories of the people who continue to cultivate forage hunt cook and consume what the rest of us have forgotten or didn't even know existed Take honey not the familiar product sold in plastic bottles but the wild honey gathered by the Hadza people of East Africa whose diet consists of eight hundred different plants and animals and who communicate with birds in order to locate bees nests Or consider murnong once the staple food of Aboriginal Australians this small root vegetable with the sweet taste of coconut is undergoing a revival after nearly being driven to extinction And in Sierra Leone there are just a few surviving *stenophylla* trees a plant species now considered crucial to the future of coffee From an Indigenous American chef refining precolonial recipes to farmers tending Geechee red peas on the Sea Islands of Georgia the individuals profiled in *Eating to Extinction* are essential guides to treasured foods that have endured in the face of rampant sameness and standardization They also provide a roadmap to a food system that is healthier more robust and above all richer in flavor and meaning
