renowned geographer and travel writer Nick Middleton puts his body and mind to the test in an attempt to find the answer His mission is to learn how to cope with four especially horrendous habitats Through arctic wasteland jungle desert and swamp Nick pits himself against the elements and explains the geographical conditions that conspire to produce the world s harshest ecologies He also discovers the various human quirks that people have evolved to make life at the edge bearable In northern Greenland Nick joins a group of Inuits hunting for narwhal crucial to the group s survival on the edge of fragile sea ice while in the jungle he ventures into Congo s tropical forest home of the Biaka pygmies He joins the annual crossing of the Tenere desert by the women of the Tubu tribe to collect dates and then travels to Papua one of the least explored places on earth to find the Kombai people a remote group of tree house dwellers above the Asmat region s flood plain Extremes is Nick Middleton s amazing account of four of the most unwelcoming environments on earth Can he pick up enough tips from the indigenous people of these locations to hack it at the very edge of human existence or will his mid latitude sensibilities forever let him down

Planet Formation and Panspermia Branislav Vukotic, Joseph Seckbach, Richard Gordon, 2021-10-19 An in depth view of the panspermia hypothesis examined against the latest knowledge of planetary formation and related processes Panspermia is the concept that life can be passively transported through space on various bodies and seed habitable planets and moons which we are beginning to learn may exist in large numbers It is an old idea but not popular with those who prefer that life on Earth started on Earth an alternative also unproven hypothesis This book updates the concept of panspermia in the light of new evidence on planet formation molecular clouds solar system motions supernovae ejection mechanisms etc Thus it is to be a book about newly understood prospects for the movement of life through space The novel approach presented in this book gives new insights into the panspermia theory and its connection with planetary formation and the evolution of galaxies This offers a good starting point for future research proposals about exolife and a better perspective for empirical scrutiny of panspermia theory Also the key to understanding life in the universe is to understand that the planetary formation process is convolved with the evolution of stellar systems in their galactic environment The book provides the synthesis of all these elements and gives the readers an up to date insight on how panspermia might fit into the big picture Audience Given the intrinsic interdisciplinary nature of the panspermia hypothesis the book will have a wide audience across various scientific disciplines covering astronomy biology physics and chemistry Apart from scientists the book will appeal to engineers who are involved in planning and realization of future space missions
