Widiger, 2017-03-27

There is a vast body of research supporting the Five Factor Model as the predominant model of general personality structure within the field of social psychology The Oxford Handbook of the Five Factor Model is dedicated to this model of research

Readings in Extraversion-introversion: Bearings on basic psychological processes Hans Jurgen Eysenck,1971

Personality, Stress and Problem Solving Sudarshan Hasija,1993 The book experimentally demonstrates that induced stress has adverse effects on the performance of not only the average intelligent person but has negative consequences for the high intelligence group and it leads to increase in state anxiety which in turn has debilitating effects **Handbook of Neuropsychology and Aging** Paul David Nussbaum,1997-05-31 Leaders in neuropsychology behavioral neurology speech and language science neuropsychiatry and many other disciplines contribute to this volume the first comprehensive review of knowledge in the field They discuss a wide range of disorders including areas of recent research such as frontal lobe dementias and the neuropsychological aspects of late life depression and clinical problems typically given insufficient consideration in other works such as seizure disorder head injury and mental retardation Normal aging is also covered in detail and assessment procedures and clinical interventions are given thorough treatment Other highlights include discussions of guardianship and caregiving personality and behavior psychotic disorders Alzheimer s and head trauma A Model for Personality H.J. Eysenck,2012-12-06 H J Eysenck This book is not an introduction to personality research it is not a textbook and above all it is not a model of personality The title A Model for Personality was chosen on purpose to indicate that we are here concerned with a discussion of how models in this field ought to be constructed what their functions were and whether such models or paradigms could with advantage be produced at this stage of development One particular aspect of personality extraversion introversion E has been chosen to exemplify the desiderata which emerge from such a discussion It is not suggested that personality and E are synonymous merely that this particular dimension is perhaps better known than any other has had more experimental work done on it than any other and has acquired a better theoretical substructure and more links with genetics and physiology than any other Hence it seems most likely to serve as an example of how a satisfactory model of personality might ultimately be constructed i e by analogy with E Other dimensions of personality such as neuroticism stability or psychoticism superego functioning are mentioned in the discussion but only when they overlap or interrelate with E The book uses E as an example to illustrate the way in which a model of personality can be constructed but it is in no way a summary of all that is known about E *Well-Being* Daniel Kahneman,Edward Diener,Norbert Schwarz,1999-07-08 The nature of well being is one of the most enduring and elusive subjects of human inquiry Well Being draws upon the latest scientific research to transform our understanding of this ancient question With contributions from leading authorities in psychology social psychology and neuroscience this volume presents the definitive account of current scientific efforts to understand human pleasure and pain contentment and despair The distinguished contributors to this volume combine a rigorous analysis of human sensations emotions and moods with a broad assessment of the many factors

from heredity to nationality that bear on our well being Using the tools of experimental science the contributors confront the puzzles of human likes and dislikes Why do we grow accustomed and desensitized to changes in our lives both good and bad Does our happiness reflect the circumstances of our lives or is it determined by our temperament and personality Why do humans acquire tastes for sensations that are initially painful or unpleasant By examining the roots of our everyday likes and dislikes the book also sheds light on some of the more extreme examples of attraction and aversion such as addiction and depression Among its wide ranging inquiries Well Being examines systematic differences in moods and behaviors between genders explaining why women suffer higher rates of depression and anxiety than men but are also more inclined to express positive emotions The book also makes international comparisons finding that some countries populations report higher levels of happiness than others The contributors deploy an array of methods from the surveys and questionnaires of social science to psychological and physiological experiments to develop a comprehensive new approach to the study of well being They show how the sensory pleasures of the body can tell us something about the higher pleasures of the mind and even how the effectiveness of our immune system can depend upon the health of our social relationships

Research in the Social Scientific Study of Religion Joanne Marie Greer, David O. Moberg, 2001-04 Various articles are presented covering psychological sociological and cross cultural topics of relevance to religious spiritual researchers and academics

The 3M Model of Motivation and Personality John C. Mowen, 2013-03-14 Integrating control theory evolutionary psychology and a hierarchical approach to personality this book presents a new approach to motivation personality and consumer behavior Called the 3M which stands for Meta theoretic Model of Motivation this theory seeks to account for how personality traits interact with the situation to influence consumer attitudes and actions The book proposes that multiple personality traits combine to form a motivational network that acts to influence behavior Mowen argues that in order to understand the causes of enduring behavioral tendencies one must identify the more abstract traits underlying surface behaviors In constructing the 3M model the author reports data from fifteen empirical studies employing over 3500 respondents In this hierarchical model four types of personality traits are identified elemental compound situational and surface traits Eight elemental traits are proposed as forming the underlying dimensions of personality Consistent with control theory the research reveals that the elemental traits combine to form compound traits such as self efficacy task orientation playfulness and competitiveness These elemental and compound traits combine with situational influences to cause enduring behavioral tendencies within general situational contexts Examples of situational traits investigated include impulsive buying value consciousness sports interest and health motivation In the 3M model the elemental compound and situational traits combine to yield surface traits which are enduring dispositions to act in specific behavioral contexts Five surface traits are empirically investigated in the book compulsive buying sports participation healthy diet lifestyles proneness to bargaining and a tendency to frugality Across these five studies the empirical results reveal that the 3M model accounts for over 44% of the variance in the surface

trait measures By presenting a new meta theory of motivation and personality that is testable Mowen s 3M model accounts for high levels of variance in consumer behavior By integrating the work of selected past and current theorists into a comprehensible whole the 3M model provides coherence in a field currently dominated by conflicting ideas theories and approaches The book provides evidence that by understanding the individual dispositions that underlie consumer behavior public policy officials and marketing specialists can develop better communication programs to influence and persuade their target audiences The book shows how to employ the 3M model to segment the marketplace provide psychographic inventories position brands create promotional themes and develop brand personalities Handbook of Self-Regulation, Second Edition Kathleen D. Vohs, Roy F. Baumeister, 2011-03-29 This authoritative handbook comprehensively examines the conscious and nonconscious processes by which people regulate their thoughts emotions attention behavior and impulses Individual differences in self regulatory capacities are explored as are developmental pathways The volume reviews how self regulation shapes and is shaped by social relationships Failures of self regulation are also addressed in chapters on addictions overeating compulsive spending and attention deficit hyperactivity disorder Wherever possible contributors identify implications of the research for helping people enhance their self regulatory capacities and pursue desired goals
