

WET-DRY TROPICAL CLIMATES

Seasonal changes occur between wet tropical air masses and dry tropical air masses. Therefore there is a very wet season and a very dry season. Trade winds dominate during dry seasons. It gets slightly cooler during this dry season but will become extremely hot just before the wet season.

Ecology Of The Wet Dry Tropics:

Ecology of the Wet-dry Tropics M. G. Ridpath, L. K. Corbett, 1985 **Physiological ecology of plants of the wet tropics** Ernesto Medina, H. A. Mooney, C. Vazquez-Yanes, 2012-12-06 This book contains the results of a Symposium on the physiological ecology of plants of the lowland wet tropics held in Mexico in June 1983 organized by the Instituto de Biología of the National University of Mexico U N A M and sponsored by UNAM CONACYT NSF and UNESCO CIET A workshop portion of the Symposium was held at the tropical research station at Los Tuxtlas Veracruz This Symposium originated in response to the increasing interest in the physiological ecology of tropical plants because of the potential of this field to provide a basic understanding of functioning of tropical plant communities The study of physiological ecology of tropical plants has been delayed in some cases by the lack of conceptual framework but also by the absence of appropriate instrumentation and techniques with which to conduct precise measurements under high temperature high humidity field conditions Hypotheses and concepts of the physiological ecology of tropical plants have been based mainly on observational data and the analysis of growth forms and leaf anatomy The early work of A F W Schimper and O Stocker in Asia and the extensive surveys made by H Walter on the osmotic potentials of plants in the tropics and subtropics constituted until relatively recently the only available information on the water and carbon relations of tropical plants **The Ecology of Australia's Wet Tropics** Roger L. Kitching, 1988 **Symposium, Ecology of the Wet Dry Tropics, with Open Forum and Annual Scientific Meeting**, 1983 *Tropical Ecosystems and Ecological Concepts* Patrick L. Osborne, 2012-02-09 Introductory textbook using the entire range of tropical ecosystems terrestrial freshwater and marine to illustrate and explain major ecological concepts **Seasonally Dry Tropical Forests** Stephen H. Bullock, Harold A. Mooney, Ernesto Medina, 1995-11-24 Review of tropical dry forest biogeography palaeontology ecology and ecosystem functions *Ecology of Freshwater and Estuarine Wetlands* Darold P. Batzer, Rebecca R. Sharitz, 2006 Publisher description **Behavioral Ecology of Tropical Animals** Regina H. Macedo, 2010-11-15 Advances in the Study of Behavior was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This thematic volume makes another important contribution to the development of the field by bringing together material that aggregates studies conducted on the behavior of tropical animals Advances in the Study of Behavior is now available online at ScienceDirect full text online from volume 30 onward *Tropical Fire Ecology* Mark Cochrane, 2010-04-11 The tropics are home to most of the world's biodiversity and are currently the frontier for human settlement Tropical ecosystems are being converted to agricultural and other land uses at unprecedented rates Land conversion and maintenance almost always rely on fire and because of this fire is now more prevalent in the tropics than anywhere else on Earth Despite pervasive fire human settlement and threatened biodiversity there is little comprehensive information available on fire and its effects in tropical ecosystems Tropical deforestation especially in rainforests has been widely documented for many years Forests are

cut down and allowed to dry before being burned to remove biomass and release nutrients to grow crops However fires do not always stop at the borders of cleared forests Tremendously damaging fires are increasingly spreading into forests that were never evolutionarily prepared for wild fires The largest fires on the planet in recent decades have occurred in tropical forests and burned millions of hectares in several countries The numerous ecosystems of the tropics have differing levels of fire resistance resilience or dependence At present there is little appreciation of the seriousness of the wild fire situation in tropical rainforests but there is even less understanding of the role that fire plays in the ecology of many fire adapted tropical ecosystems such as savannas grasslands and other forest types

Tropical Forest Ecology and Management for the Anthropocene Grizelle González, Ariel E. Lugo, 2019-12-18 This Special Issue looks forward as well as backward to best analyze the forest conservation challenges of the Caribbean This is made possible by 75 years of research and applications by the United States Department of Agriculture International Institute of Tropical Forestry the Institute of Puerto Rico It transforms Holocene based scientific paradigms of the tropics into Anthropocene applications and outlooks of wilderness managed forests and urban environments This volume showcases how the focus of the Institute's programs is evolving to support sustainable tropical forest conservation despite uncertain conditions The manuscripts showcased here highlight the importance of shared stewardship and a long term hands on approach to conservation research programs and novel organizations intended to meet contemporary conservation challenges Policies relevant to the Anthropocene as well as the use of experiments to anticipate future responses of tropical forests to global warming are reexamined in these pages Urban topics include how cities can co produce new knowledge to spark sustainable and resilient transformations Long term results and research applications of topics such as soil biota migratory birds tropical vegetation substrate chemistry and the tropical carbon cycle are also described in the volume Moreover the question of how to best use land on a tropical island is addressed This volume is intended to be of interest to all actors involved in long term sustainable forest management and research in light of the historical lessons and future directions that may come out of a better understanding of tropical cities and forests in the Anthropocene epoch

Tropical Stream Ecology David Dudgeon, 2011-05-04 *Tropical Stream Ecology* describes the main features of tropical streams and their ecology It covers the major physico chemical features important processes such as primary production and organic matter transformation as well as the main groups of consumers invertebrates fishes and other vertebrates Information on concepts and paradigms developed in north temperate latitudes and how they do not match the reality of ecosystems further south is expertly addressed The pressing matter of conservation of tropical streams and their biodiversity is included in almost every chapter with a final chapter providing a synthesis on conservation issues For the first time *Tropical Stream Ecology* places an important emphasis on viewing research carried out in contributions from international literature First synthetic account of the ecology of all types of tropical streams Covers all of the major tropical regions Detailed consideration of possible fundamental differences between tropical and temperate stream ecosystems

Threats faced by tropical stream ecosystems and possible conservation actions Descriptions and syntheses life histories and breeding patterns of major aquatic consumers fishes invertebrates *Dryland Ecohydrology* Paolo D'Odorico, Amilcare Porporato, 2006-03-14 By combining the analysis of biotic and abiotic components of terrestrial ecosystems this volume provides a synthesis of material on arid and semiarid landscapes which is currently scattered in a number of books and journal articles The focus on water limited ecosystems is motivated by their high sensitivity to daily seasonal and decadal perturbations in water availability and by the ecologic climatic and economic significance of most of the world's drylands Conceived as a tool for scientists working in the area of the earth and environmental sciences this book presents the basic principles of eco hydrology as well as a broad spectrum of topics and advances in this research field The chapters have been contributed by authors with different expertise who work in several arid areas around the world They describe the various interactions among the biological and physical dynamics in dryland ecosystems starting from basic processes in the soil vegetation climate system to landscape scale hydrologic and geomorphic processes ecohydrologic controls on soil nutrient dynamics and multiscale analyses of disturbances and patterns **Culture, Ecology, and Economy of Fire Management in North Australian Savannas** Jeremy Russell-Smith, Peter J. Whitehead, Peter Cooke, 2009 In 12 multi authored chapters this book documents key challenges and novel options for addressing chronic landscape scale fire management issues in North Australian Savannas through development of both collaborative cross cultural approaches and commercially supported environment programs *Landscape and Vegetation Ecology of the Kakadu Region, Northern Australia* C.M. Finlayson, Isabell von Oertzen, 2012-12-06 The Kakadu region of northern Australia is swarming over the landscape with their meters steeped in cultural history and natural grandeur and notebooks and a vast store of information Over the past few decades the rich cultural and was gathered This book is a summary of the natural heritage of this fascinating region has immense amount of information collected on the become increasingly known to more and more geobotanic features of the region The cultural people At the same time as the natural heritage of heritage of the traditional Aboriginal inhabitants the region was being recognised by conservation of the region and the diverse and populous fauna vationists and tourists alike the mineral wealth were also investigated but both these subjects was being recognised by mining enterprises warrant their own separate volumes and are not Almost inevitably the mix of conservation and treated here Throughout this period of intense scientific mining interests led to conflict that is still not completely resolved However much has happened interest the very nature of the region has changed opened over the years and we now have a major Besides changes in human habitation the physical and biological environment has come under national park that is largely leased from the Aboriginal traditional owners under a manage challenge and even threat We now have more weed species We no longer have the large ment agreement **Eucalypt Ecology** Jann Elizabeth Williams, John Woinarski, 1997-11-13 The dominant trees of Australia eucalypts make up a remarkable genus This authoritative volume provides current reviews by active researchers of many disciplines

including evolutionary history genetics distribution and modelling the relationship of eucalypts to fire and nutrients ecophysiology pollination and reproductive ecology interactions between eucalypts and other co existing biota including fungi invertebrates and vertebrates and conservation and management Together these reviews shed light on the reasons for the great success of eucalypts in Australian environments and provide a comprehensive summary for comparison with the ecology of major woody plant genera in other continents This volume is of particular relevance to Australian ecologists but also provides a stimulating perspective to students of vegetation ecology in all continents *Routledge Handbook of Ecological and Environmental Restoration* Stuart K. Allison, Stephen D. Murphy, 2017-05-18 Ecological restoration is a rapidly evolving discipline that is engaged with developing both methodologies and strategies for repairing damaged and polluted ecosystems and environments During the last decade the rapid pace of climate change coupled with continuing habitat destruction and the spread of non native species to new habitats has forced restoration ecologists to re evaluate their goals and the methods they use This comprehensive handbook brings together an internationally respected group of established and rising experts in the field The book begins with a description of current practices and the state of knowledge in particular areas of restoration and then identifies new directions that will help the field achieve increasing levels of future success Part I provides basic background about ecological and environmental restoration Part II systematically reviews restoration in key ecosystem types located throughout the world In Part III management and policy issues are examined in detail offering the first comprehensive treatment of policy relevance in the field while Part IV looks to the future Ultimately good ecological restoration depends upon a combination of good science policy planning and outreach all issues that are addressed in this unrivalled volume Status of Conservation and Decline of Amphibians Harold Heatwole, Jodi Rowley, 2018-06 Amphibians are among the most threatened groups of animals on earth In part due to their highly permeable skin amphibians are highly sensitive to environmental changes and pollution and provide an early warning system of deteriorating environmental conditions The more we learn about the impact of environmental changes on amphibians the better we as humans will be able to arrest their demise and our own Status of Conservation and Decline of Amphibians brings together the current knowledge on the status of the unique frogs of Australia New Zealand and the Pacific Although geographically proximate each region presents unique challenges and opportunities in amphibian research and conservation This book contributes to an understanding of the current conservation status of the amphibians of each region aims to stimulate research into halting amphibian declines and provides a better foundation for making conservation decisions It is an invaluable reference for environmental and governmental agencies researchers policy makers involved with biodiversity conservation and the interested public Lizard Ecology Stephen M. Reilly, Lance D. McBrayer, Donald B. Miles, 2007-07-12 Originally published in 2006 this book was the first critical review of the effects of lizard foraging modes in 30 years

Ecological Connectivity among Tropical Coastal Ecosystems Ivan Nagelkerken, 2009-09-23 Mangrove forests seagrass beds and coral reefs are circumtropical ecosystems that are highly productive and provide many important biological functions and economic services These ecosystems cover large surface areas in the shallow tropical coastal seascape but have suffered from serious human degradation especially in the last few decades Part of their diversity productivity and functioning seems to be based on their juxtaposition Especially in the last decade significant advances have been made on new insights into their ecological connectivity This authoritative book provides a first time comprehensive review of the major ecological interactions across tropical marine ecosystems that result from the mutual exchange of nutrients organic matter fish and crustaceans A group of leading authors from around the world reviews the patterns and underlying mechanisms of important biogeochemical and biological linkages among tropical coastal ecosystems in 15 chapters Included are chapters that review cutting edge tools to study and quantify these linkages the importance of such linkages for fisheries and how tropical ecosystems should be conserved and managed for sustainable use by future generations The book uses examples from all over the world and provides an up to date review of the latest published literature This book is a must read for professionals working on the conservation management and ecology of mangrove seagrass and coral reef ecosystems
