Economics In Real Time:

Economics in Real Time C. John McDermott, 2004 A new model for contemporary economic behavior **Time in Contemporary Intellectual Thought** P.J.N. Baert, 1999-12-09 In this book fifteen authors from a wide spectrum of disciplines ranging from the natural sciences to the arts offer assessments of the way time enters their work the definition and uses of time that have proved most productive or problematic and the lessons their subjects can offer for our understanding of time beyond the classroom and laboratory walls The authors have tried without sacrificing analytical rigour to make their contribution accessible to a cross disciplinary readership Each chapter reviews time's past and present application in its respective field considers the practical and logical problems that remain and assesses the methods researchers are using to escape or resolve them Particular attention is paid to ways in which the technical treatment of time for problem solving and model building around specific phenomena call on or clash with our intuitive perceptions of what time is and does The spans of time considered range from the fractions of seconds it takes unstable particles to disintegrate to the millions of years required for one species to give way to another Like all central conceptual words time is understood on several levels By inviting input from a broad range of disciplines the book aims to provide a fuller understanding of those levels and of the common ground that lurks at their base Much agreement emerges not only on the nature of the problems time presents to modern intellectual thought but also on the clues that recent discoveries may offer towards possible solutions **The Oxford Handbook of Economic Forecasting** Michael P. Clements, David F. Hendry, 2011-06-29 This Handbook provides up to date coverage of both new and well established fields in the sphere of economic forecasting The chapters are written by world experts in their respective fields and provide authoritative yet accessible accounts of the key concepts subject matter and techniques in a number of diverse but related areas It covers the ways in which the availability of ever more plentiful data and computational power have been used in forecasting in terms of the frequency of observations the number of variables and the use of multiple data vintages Greater data availability has been coupled with developments in statistical theory and economic analysis to allow more elaborate and complicated models to be entertained the volume provides explanations and critiques of these developments These include factor models DSGE models restricted vector autoregressions and non linear models as well as models for handling data observed at mixed frequencies high frequency data multiple data vintages methods for forecasting when there are structural breaks and how breaks might be forecast Also covered are areas which are less commonly associated with economic forecasting such as climate change health economics long horizon growth forecasting and political elections Econometric forecasting has important contributions to make in these areas along with how their developments inform the mainstream **Output Gap Uncertainty and Real-Time Monetary Policy** Francesco Grigoli, Alexander Herman, Mr. Andrew Swiston, Mr. Gabriel Di Bella, 2015-01-23 Output gap estimates are subject to a wide range of uncertainty owing to data revisions and the difficulty in distinguishing between cycle and trend in

real time This is important given the central role in monetary policy of assessments of economic activity relative to capacity We show that country desks tend to overestimate economic slack especially during recessions and that uncertainty in initial output gap estimates persists several years Only a small share of output gap revisions is predictable ex ante based on characteristics like output dynamics data quality and policy frameworks We also show that for a group of Latin American inflation targeters the prescriptions from typical monetary policy rules are subject to large changes due to output gap revisions These revisions explain a sizable proportion of the deviation of inflation from target suggesting this information is not accounted for in real time policy decisions

 Mitchell Polinsky, Steven Shavell, 2007-11-07 Law can be viewed as a body of rules and legal sanctions that channel behavior
 in socially desirable directions for example by encouraging individuals to take proper precautions to prevent accidents or by
 discouraging competitors from colluding to raise prices The incentives created by the legal system are thus a natural subject
 of study by economists Moreover given the importance of law to the welfare of societies the economic analysis of law merits
 prominent treatment as a subdiscipline of economics This two volume Handbook is intended to foster the study of the legal
