comprehensive guide to reforms in network industries in communications energy transport and water It is organized by generic topic sector and region Its authors are acknowledged experts I am confident that this Handbook will be a widely read and valuable resource for many years Martin Cave London School of Economics UK Quite an accomplishment this Handbook provides by far the most comprehensive overview of the role of the private sector and competition in infrastructure industries with thoughtful surveys of each of the major infrastructure sectors and of the key regions and countries Jos G mez Ib ez Harvard University US In recent decades all infrastructures have undergone significant restructuring This worldwide phenomenon is often labelled liberalization and although expectations were high with respect to lower prices greater efficiency and innovation the expected gains have not always been fully realized This extensive state of the art Handbook provides a comprehensive overview of the various experiences of liberalization across different sectors regions and disciplines The multidisciplinary approach focuses on the economic political and institutional aspects of liberalization as well as to a lesser extent on technological issues As such it constitutes a unique contribution as this broad overview is often lost in the sector specific country focused and purely disciplinary approaches prevalent in the current literature Sectors explored include telecoms the Internet energy and transport whilst the truly global perspective incorporates unique case studies from an array of developed and developing countries including the US China India and the EU The International Handbook of Network Industries will become the definitive volume for academics researchers and students of economics political science and law interested in infrastructure regulation It will also prove a valuable guide to practitioners and policy makers involved in liberalization and competition

Welfens, George Yarrow, Ruslan Grinberg, Cornelius Graack, 2012-12-06 Competition in network industries faces particular problems which are analyzed from both a theoretical and policy perspective Issues of vertical integration deregulation and privatization are covered While competition and privatization are rapidly unfolding in telecommunications in Western and Eastern Europe energy and railway transportation represent sectors of more gradual liberalization The different market characteristics of telecommunications energy and transportation raise consistency problems in the fields of deregulation investment strategies and internationalization While transformation policies create opportunities for liberalization in Eastern Europe and Russia the latter shows critical problems in ending monopoly and state ownership Network industries could be subject to competition and promise major investment opportunities plus consumer benefits
