Apple, 2006 Did you know that the most common surgical eye procedure today began as a tragic injury to a WWII pilot Did you know that one of the first medical devices to ever be implanted into a human was performed by an ophthalmologist Do you know the riveting story behind the man who envisioned and achieved ground breaking medical advancements for vision care _____ An innovator in eye surgery and

undisputed inventor of the intraocular lens IOL Sir Harold Ridley achieved some of the most important discoveries in

ophthalmology and medicine over the last 100 years The compelling story of Sir Harold Ridley is one not widely known among today s medical community It is a story of an unassuming medical leader It is a story that needs to be told not only for its historical value but also to provide guidance for future generations on bringing new inventions to the world In the early 1980 s Dr David J Apple one of the most prominent American ophthalmologists and eye researchers conducted studies that by the mid 1980 s had verified that Ridley s innovation the implantation of the IOL was potentially safe and effective Upon hearing of these studies Ridley requested to meet Dr Apple at Ridley s home in England where a life long personal and professional relationship was born Inside Sir Harold Ridley and His Fight for Sight He Changed the World So That We May Better See It Dr David J Apple chronicles the amazing career and life of Sir Harold Ridley based on their friendship and on never before published documents photographs and memorabilia Ridley s tremendous impact on ophthalmology and specifically on the treatment of cataract patients is a story that until now has not been told Sir Harold Ridley and His Fight for Sight is based on 26 years of research performed by Dr Apple Interviews with friends families colleagues as well as the review of medical and hospital records military records and museum exhibits have brought the story of Sir Harold Ridley to forefront of the medical community today Dr Apple brings life and credibility to the pages of Sir Harold Ridley and His Fight for Sight with over 600 images testimonials from Sir Harold Ridley on his quest that began in 1935 and a personal touch that only a true colleague and friend can convey From Harold Ridley 1989 I had twenty five years in the wilderness and would have been spared much suffering if David Apple the one who at last took the trouble to read and analyze all the early implant papers had appeared in the 1950 s for a whole generation of cataract patients might then have enjoyed full visual rehabilitation instead of suffering the abnormalities of aphakia In 1940 during World War II in the legendary Battle of Britain a British pilot was tragically blinded when shattered fragments of his cockpit canopy were embedded in his eyes This tragic event led to the identification of an implant material and eventuated in Ridley s accomplishing a complete cure for cataracts Ridley focused the next decade of his life on the development of an artificial lens to be implanted following the removal of a cataract This device has restored vision to nearly 200 million people worldwide and presently 9 million annually After performing the first IOL implant on a cataract patient Sir Harold Ridley was met with opposition from the medical community It took three decades of struggle until his goal became reality Now the cataract surgery and its cousin refractive surgery including the procedure LASIK are the most common surgical procedures performed today Paving the way for past current and future ophthalmologists Sir Harold Ridley not only implanted the first medical device into a patient he pioneered multiple once in a lifetime discoveries including in [Cumulated Index Medicus](#) ,1995 **Cataract and Refractive Surgery** Thomas Kohnen,Douglas D. Corneal Transplantation Namrata Sharma, Ritu Nagpal, Rasik B Vajpayee, 2022-11-09. The cornea is the clear outer layer at the front of the eyeball. It acts as a window to the eye. The cornea helps to focus light rays onto the retina; this image is then transmitted to the brain. When the cornea is damaged, it can become less transparent or its shape can change. This can prevent light reaching the retina and causes the picture transmitted to the brain to be distorted or unclear. A corneal transplant, also known as keratoplasty or a corneal graft, is an operation to remove all or part of a damaged cornea and replace it with healthy donor tissue. It is used to improve sight, relieve pain, and treat severe infection or damage. One of the most common reasons for a cornea transplant is a condition called keratoconus, which causes the cornea to change shape. NHS UK. This book is a guide to corneal transplantation/keratoplasty for ophthalmic surgeons. Divided into seven sections, the text begins with an overview of evolution, preoperative considerations, and eye banking. The following sections cover a multitude of keratoplasty techniques, including endothelial keratoplasty and their potential complications. The book concludes with discussion on alternatives to corneal transplantation. The third edition of this comprehensive manual has been fully revised with new topics added to provide surgeons with the latest advances in the field. A selection of operative videos can be accessed via a QR code provided in the book. The previous edition 9788184488593 published in 2010.

Lens Implantation P. Leonard, J. Rommel, 2012-12-06. The authors of this book are busy practical men with no particular barrow to push. The text of the book includes a comprehensive review of all aspects of intraocular lens surgery, including details of the design, optics, chemistry, and sterilization of intraocular lenses. Its value is enhanced by excellent illustrations and extensive tabulated references to the literature. Accounts of patient acceptability are balanced against candid discussion of complications and their management. The historical introduction recalls that in the early stages of development of the art, over a period of 10 years, two dozen different lens designs were proposed, most claiming elimination of problems which had arisen with their predecessors. Eventually, nearly all disappeared from the scene. In an age where every cataract surgeon has to determine a personal position on intraocular lens implantation, the author's reflections on these matters are timely. Intraocular lenses are neither a miracle nor a menace, provided that personal decisions and preferences are carefully thought through and put into practice upon the basis of known facts and not upon the basis of fickle fashion and fad. This book provides a background upon which the reader can evaluate in his own mind the validity of information provided by the manufacturers of various lens designs.
