*Phytoremediation of Contaminated Soil and Water* Norman Terry, Gary S. Banuelos, 2020-11-25 Phytoremediation is an exciting new technology that utilizes metal accumulating plants to rid soil of heavy metal and radionuclides Hyperaccumulation plants are an appealing and economical alternative to current

methods of soil recovery Phytoremediation of Contaminated Soil and Water is the most thorough literary examination of the subject available today The successful implementation of phytoremediation depends on identifying plant material that is well adapted to specific toxic sites Gentle remediation is then applied in situ or at the contamination site No soil excavation or transport is necessary This severely contains the potential risk of the pollutants entering the food chain And it s cost effective The progress of modern man has created many sites contaminated with heavy metals The effected land is toxic to plants and animals which creates considerable public interest in remediation But the commonly used remedies are ex situ which poses an expensive dilemma and an even greater threat Phytoremediation offers the prospect of a cheaper and healthier way to deal with this problem Read Phytoremediation of Contaminated Soil and Water to learn just how far this burgeoning technology has developed Competitive Sorption and Transport of Heavy Metals in Soils and Geological Media H. Magdi Selim,2016-04-19 Most reported incidents of soil contamination include an array of heavy metals species rather than a single ion The various interactions in these multicomponent or multiple ion systems significantly impact the fate and transport of heavy metals and competition for sorption sites on soil matrix surfaces is a common phenomenon Because of this con
