Extremal Paths in Graphs Ulrich Huckenbeck,1997 **Shortest Connectivity** Dietmar Cieslik,2004-11-19 The aim in this graduate level text is to outline the key mathematical concepts that underpin these important questions in applied mathematics These concepts involve discrete mathematics particularly graph theory optimization computer science and several ideas in biology *A Guide to the Literature on Semirings and their Applications in Mathematics and Information Sciences* K. Glazek,2013-06-29 This volume presents a short guide to the extensive literature concerning semirings along with a complete bibliography The literature has been created over many years in variety of languages by authors representing different schools of mathematics and working in various related fields In many instances the terminology used is not universal which further compounds the difficulty of locating pertinent sources even in this age of the Internet and electronic dissemination of research results So far there has been no single reference that could guide the interested scholar or student to the relevant publications This book is an attempt to fill this gap My interest in the theory of semirings began in the early sixties when together with Bogdan W glorz I tried to investigate some algebraic aspects of compactifications of topological spaces semirings of semicontinuous functions and the general ideal theory for special semirings Unfortunately local algebraists in Poland told me at that time that there was nothing interesting in investigating semiring theory because ring theory was still being developed However some time later we became aware of some similar investigations having already been done The theory of semirings has remained my first love ever since and I have been interested in the results in this field that have been appearing in literature even though I have not been active in this area myself *Forthcoming Books* Rose Arny,1997 *Integer Programming and Related Areas* R.v. Randow,2012-12-06 *American Book Publishing Record* ,1997-09 *Mathematical Reviews* ,2001 *International Books in Print* ,1986 **Integer Programming and Related Areas** Rabe v. Randow,2012-12-06 The fields of integer programming and combinatorial optimization continue to be areas of great vitality with an ever increasing number of publications and journals appearing A classified bibliography thus continues to be necessary and useful today even more so than it did when the project of which this is the fifth volume was started in 1970 in the Institut für Ökonometrie und Operations Research of the University of Bonn The pioneering first volume was compiled by Claus Kastning during the years 1970 1975 and appeared in 1976 as Volume 128 of the series Lecture Notes in Economics and Mathematical Systems published by the Springer Verlag Work on the project was continued by Dirk Hausmann Reinhardt Euler and Rabe von Randow and resulted in the publication of the second third and fourth volumes in 1978 1982 and 1985 Volumes 160 197 and 243 of the above series The present book constitutes the fifth volume of the bibliography and covers the period from autumn 1984 to the end of 1987 It contains 5864 new publications by 4480 authors and was compiled by Rabe von Randow Its form is practically identical to that of the first four volumes some additions having been made to the subject list *Integer Programming and Related Areas* Universität Bonn. Institut für

Ökonometrie und Operations Research,1982 Satzungen und Mitgliderverzeichnis Gesellschaft für Angewandte Mathematik und Mechanik,1998 *Rundbrief der Gesellschaft für Angewandte Mathematik und Mechanik* Gesellschaft für Angewandte Mathematik und Mechanik,1998 *Deutsche Nationalbibliographie und Bibliographie der im Ausland erschienenen deutschsprachigen Veröffentlichungen* ,1996 **International Mathematical News** ,1997 **Erdős**

Centennial László Lovász,Imre Ruzsa,Vera T. Sós,2014-01-24 Paul Erdős was one of the most influential mathematicians of the twentieth century whose work in number theory combinatorics set theory analysis and other branches of mathematics has determined the development of large areas of these fields In 1999 a conference was organized to survey his work his contributions to mathematics and the far reaching impact of his work on many branches of mathematics On the 100th anniversary of his birth this volume undertakes the almost impossible task to describe the ways in which problems raised by him and topics initiated by him indeed whole branches of mathematics continue to flourish Written by outstanding researchers in these areas these papers include extensive surveys of classical results as well as of new developments

Research Trends in Combinatorial Optimization William J. Cook,László Lovász,Jens Vygen,2008-11-07 The editors and authors dedicate this book to Bernhard Korte on the occasion of his seventieth birthday We the editors are happy about the overwhelming feedback to our initiative to honor him with this book and with a workshop in Bonn on November 3 7 2008 Although this would be a reason to look back we would rather like to look forward and see what are the interesting research directions today This book is written by leading experts in combinatorial optimization All papers were carefully reviewed and eventually twenty three of the invited papers were accepted for this book The breadth of topics is typical for the field combinatorial optimization builds bridges between areas like combinatorics and graph theory submodular functions and matroids network flows and connectivity approximation algorithms and mathematical programming computational geometry and polyhedral combinatorics All these topics are related and they are all addressed in this book Combinatorial optimization is also known for its numerous applications To limit the scope however this book is not primarily about applications although some are mentioned at various places Most papers in this volume are surveys that provide an excellent overview of an active research area but this book also contains many new results Highlighting many of the currently most interesting research directions in combinatorial optimization we hope that this book constitutes a good basis for future research in these areas

Strategies for Sequential Search and Selection in Real Time F. Thomas Bruss,1992 This volume contains the proceedings of the MS IMS SIAM Joint Summer Research Conference on Strategies for Sequential Search and Selection in Real Time held in June 1990 at the University of Massachusetts at Amherst The conference focused on problems related to sequential observation of random variables and selection of actions in real time This book will provide readers with a feeling

for the breadth and depth of contemporary research in these areas **Taming the Infinities of Concurrency** Stefan Kiefer, Jan Křetínský, Antonín Kučera, 2024-03-19

Javier Esparza received his primary degree in Theoretical Physics and in 1990 his PhD in Computer Science from the University of Zaragoza. After positions at the University of Hildesheim, the University of Edinburgh, and the Technical University of Munich, he then held professorships at the University of Edinburgh and the University of Stuttgart and finally returned to TU Munich where he currently holds the Chair of Foundations of Software Reliability and Theoretical Computer Science. Javier is a leading researcher in concurrency theory, distributed and probabilistic systems, Petri nets, analysis of infinite state models, and more generally formal methods for the verification of computer systems. He has coauthored over 200 publications, many of them highly influential. He coauthored the monographs *Free Choice Petri Nets* and *Unfoldings: A Partial Order Approach to Model Checking*, and more recently the textbook *Automata Theory: An Algorithmic Approach*. The latter is an example of Javier's many activities as a teacher; he has supervised more than 20 PhD students, taught at more than 20 summer schools, and won many awards for his university teaching. He is regularly invited to deliver plenary talks at prestigious computer science conferences and participate in senior program committees; he has contributed as a senior member of technical working groups, society councils, and journal editorial boards, and in 2021 he became a founding Editor in Chief of the open access *TheoretiCS* journal. This Festschrift celebrates Javier's contributions on the occasion of his 60th birthday; the contributions reflect the breadth and depth of his successes in Petri nets, concurrency in general, distributed and probabilistic systems, games, formal languages, logic, program analysis, verification, and synthesis.
