Curiosities of the Sky Garrett Putman Serviss, 1909 What Froude says of history is true also of astronomy it is the most impressive where it transcends explanation It is not the mathematics of astronomy but the wonder and the mystery that seize

upon the imagination The calculation of an eclipse owes all its prestige to the sublimity of its data the operation in itself requires no more mental effort than the preparation of a railway time table The dominion which astronomy has always held over the minds of men is akin to that of poetry when the former becomes merely instructive and the latter purely didactic both lose their power over the imagination Astronomy is known as the oldest of the sciences and it will be the longest lived because it will always have arcana that have not been penetrated
