Grandtner,2005-04-08 This dictionary will present all currently accepted generic specific sub specific and variety names of trees excluding fossil and more recently extinct taxa hybrids and cultivars Only the indigenous trees of a continent those wild species that were natural elements of the spontaneous forest vegetation before the arrival of Europeans or other colonizers are included Each generic entry includes the family to which it is assigned the synonyms of the Latin name and the English French Spanish trade and other names For the English and French names the standard name is listed first followed by other available names with in parentheses the countries where they are used Where appropriate names in additional languages are also included Each infrageneric species subspecies variety entry includes in addition the distribution height type of foliage ecological characteristics and main uses of the tree when available In this volume only taxa indigenous on the North American continent are included considered in a geographical not in a political sense This means from Alaska and Greenland to Panama including Caribbean but excluding Hawaii **Elsevier's Dictionary of Medicine** A. *Elsevier's Dictionary of Medicine and Biology* G. Konstantinidis, 2005-08-18 Dictionaries are didactic books used as consultation instruments for self teaching They are composed by an ordered set of linguistic units which reflects a double structure the macrostructure which correspond to the word list and the microstructure that refers to the contents of each lemma The great value of dictionaries nests in the fact that they establish a standard nomenclature and prevent in that way the appearance of new useless synonyms This dictionary contains a total of about 27 500 main English entries and over of 130 000 translations that should normally sufficiently cover all fields of life sciences The basic criteria used to accept a word a part of the dictionary during the development period in order of importance were usage up to dateness specificity simplicity and conceptual relationships The dictionary meets the standards of higher education and covers all main fields of life sciences by setting its primary focus on the vastly developing fields of cell biology biochemistry molecular biology immunology developmental biology microbiology genetics and also the fields of human anatomy histology pathology physiology zoology and botany The fields of ecology paleontology systematics evolution biostatistics plant physiology plant anatomy plant histology biometry and lab techniques have been sufficiently covered but in a more general manner The latest Latin international anatomical terminology Terminologia Anatomica or TA has been fully incorporated and all anatomical entries have been given their international Latin TA synonym This dictionary will be a valuable and helpful tool for all scientists teachers students and generally all those that work within the fields of life sciences
