Health Resources Administration,1979 Anticipating and Assessing Health Care Technology Scenario Commission on Future Health Care Technology,2012-12-06 As noted in the Foreword this report is one of several volumes resulting from this study of future health care technology The purpose of the study as formulated by the STG was to analyze future health care technology Part of the task was to develop an early warning system for health care technology The primary goal of the

project was to develop a list or description of a number of possible and probable future health care technologies as well as information on their importance. Within the limits of time and money this has been done. However, given the vast number of possible future health care technologies, complete information on the importance of each area could not be developed in any depth for all technology. Therefore, four specific technologies were chosen and were prospectively assessed. These future technologies were examined in more depth, looking particularly at their future health and policy implications. Subsequently, the project was extended to September 1987 and two additional technologies were chosen for assessment.

An Ethic for Health Promotion David R. Buchanan, 2000-01-20. What is the goal of public health promotion today? If the leading causes of mortality nowadays are primarily attributable to lifestyle behaviors, is the purpose of research to develop the power to change those behaviors in the same way that science has been able to control infectious diseases? Or is the quest for effective behavior modification techniques antithetical to the idea of promoting well-being defined in terms of individual autonomy, dignity, and integrity? *An Ethic for Health Promotion* explores these questions.
