## **Heat Transfer Enhancement Of Heat Exchangers:**

**Heat Transfer Enhancement of Heat Exchangers** Sadik Kakaç, Arthur E. Bergles, F. Mayinger, Hafit Yüncü, 1999-03-31 Heat transfer enhancement in single phase and two phase flow heat exchangers is important in such industrial applications as power generating plant process and chemical industry heating ventilation air conditioning and refrigeration systems and the cooling of electronic equipment Energy savings are of primary importance in the design of such systems leading to more efficient environmentally friendly devices This book provides invaluable information for such purposes *Emerging Topics in Heat Transfer* Qiuwang Wang, Yitung Chen, Bengt Sundén, 2013-11-06 Presented in ten edited chapters this book encompasses important emerging topics in heat transfer equipment particularly heat exchangers The chapters have all been selected by invitation only Advances in high temperature equipment and small scale devices continue to be important as the involved heat transfer and related phenomena are often complex in nature and different mechanisms like heat conduction convection turbulence thermal radiation and phase change as well as chemical reactions may occur simultaneously The book treats various operating problems like fouling and highlights applications in heat exchangers and gas turbine cooling In engineering design and development reliable and accurate computational methods are required to replace or complement expensive and time consuming experimental trial and error work Tremendous advancements in knowledge and competence have been achieved during recent years due to improved computational solution methods for non linear partial differential equations turbulence modelling advancement and developments of computers and computing algorithms to achieve efficient and rapid simulations The chapters of the book thoroughly present such advancement in a variety of applications *Heat Transfer Enhancement with Nanofluids* Vincenzo Bianco, Oronzio Manca, Sergio Nardini, Kambiz Vafai, 2015-04-01 Nanofluids are gaining the attention of scientists and researchers around the world This new category of heat transfer medium improves the thermal conductivity of fluid by suspending small solid particles within it and offers the possibility of increased heat transfer in a variety of applications Bringing together expert contributions from *Advances in Heat Transfer Enhancement* Sujoy Kumar Saha, Manvendra Tiwari, Bengt Sundén, Zan Wu, 2016-04-23 This Brief addresses the phenomena of heat transfer enhancement A companion edition in the SpringerBrief Subseries on Thermal Engineering and Applied Science to three other monographs including Critical Heat Flux in Flow Boiling in Microchannels this volume is idea for professionals researchers and graduate students concerned with electronic cooling **Heat Exchanger Network Retrofit Through Heat Transfer Enhancement** Yufei Wang, Robin Smith, 2012 Heat exchanger network retrofit plays an important role in energy saving in process industry Many design methods for the retrofit of heat exchanger networks have been proposed during the last three decades Conventional retrofit methods rely heavily on topology modifications which often results in a long retrofit duration and high initial costs Moreover the addition of extra surface area to the heat exchanger can prove difficult due to topology safety and downtime constraints These problems can be avoided through the use of heat transfer

enhancement in heat exchanger network retrofit This thesis develops a heuristic methodology and an optimization methodology to consider heat transfer enhancement in heat exchanger network retrofit The heuristic methodology is to identify the most appropriate heat exchangers requiring heat transfer enhancements in the heat exchanger network From analysis in the heuristic roles some great physical insights are presented The optimisation method is based on simulated annealing It has been developed to find the appropriate heat exchangers to be enhanced and to calculate the level of enhancement required The new methodology allows several possible retrofit strategies using different retrofit methods be determined Comparison of these retrofit strategies demonstrates that retrofit modification duration and pay back time are reduced significantly when only heat transfer enhancement is utilised Heat transfer enhancement may increase pressure drop in a heat exchanger The fouling performance in a heat exchanger will also be affected when heat transfer enhancement is used Therefore the implications of pressure drop and fouling are assessed in the proposed methodology predicated on heat transfer enhancement Methods to reduce pressure drop and mitigate fouling are developed to promote the application of heat transfer enhancement in heat exchanger network retrofit In optimization methodology considering fouling the dynamic nature of fouling is simulated by using temperature intervals It can predict fouling performance when heat transfer enhancement is considered in the network Some models for both heat exchanger and heat transfer enhancement are used to predict the pressure drop performance in heat exchanger network retrofit Reducing pressure by modifying heat exchanger structure is proposed in this thesis From case study the pressure drop increased by heat transfer enhancement can be eliminated by modifying heat exchanger structure
