The New Paradigm of Risk in Internal Transport Supporting Logistics 4.0 System

Agnieszka Tubis, 2024-07-27 This book proposes a new approach to risk assessment in internal transport supporting material flows in the Logistics 4.0 system The development of Industry 4.0 and the accompanying digitization of processes in organizations cause changes related to the functioning of production and supporting systems As the research proves one of the areas of such change is the evolution of the risk occurring in logistics processes Despite the growing number of publications on risk assessment in Logistics 4.0 systems the research focuses solely on technical aspects related to the maintenance of cyber physical systems or organizational issues related to planning the operation of these systems However the currently developed Logistics 4.0 systems are complex cyber human technical system requiring an interdisciplinary approach to assessing the risk associated with their operation The literature research conducted by the author showed a clear research gap regarding risk assessment methods that consider the specific nature of internal logistics systems operating in the Industry 4.0 environment The purpose of the monograph is to present current risk assessment methods and indicate process and system changes related to implementing Industry 4.0 solutions in internal transport systems On this basis a risk assessment method that perceives internal transport as a complex human cyber physical system was proposed This method was developed based on a critical literature analysis which allowed to identify the current research gap and the author's research in enterprises implementing Industry 4.0 solutions Therefore the results presented in the book are the basis for developing the risk management concept offering a new body of knowledge regarding activated threats and the evolution of risk occurring in autonomous and automatic internal transport systems The presented research results are also of utilitarian importance as they provide analytical tools and formulate conclusions constituting good practices for modern enterprises interested in digitizing and automating logistics processes

Understanding and Supporting Product-Service System Designing Abhijna Neramballi, 2020-04-06 This licentiate thesis aims to establish the basis for scientifically understanding and supporting the cognitive processes involved in the conceptual design of resource efficient and effective product service systems PSSs The research carried out is transdisciplinary in nature and includes both prescriptive and descriptive studies First the cognitive nature of conceptual PSS designing is investigated Multiple pre experimental protocol studies in a laboratory setting are carried out to do so The cohort of these explorative studies includes experienced industrial practitioners conceptually designing a resource efficient PSS These descriptive studies provide quantitative insights into the cognitive effort expended by designers on various design issues and processes during conceptual PSS designing and its potential differences to conceptual product designing These insights form the basis for future research that can eventually shine light on this complex process with statistically significant empirical results Second the essence of extant prescriptive PSS design principles methods and tools is distilled through a

literature analysis and synthesis of the state of the art Subsequently important aspects that need to be considered during conceptual PSS designing are consolidated in the form of a PSS design schema Third a design navigator named lifecycle oriented function deployment LFD is developed LFD is essentially a contextual decision making support tool developed to guide the conceptual designing of environmentally benign PSSs This tool informs the designers regarding the potential environmental impacts of specific design parameters of an existing offering It subsequently guides the designers in the redesign of this existing offering into a PSS with relatively benign environmental impacts Fourth the effects of the two proposed prescriptions are tested empirically True experimental protocol studies are carried out in a laboratory setting to test the effects of the prescriptive PSS design schema on the cognition of PSS designers LFD is applied in an industrial case study using the action design research method to support the conceptual redesign of an existing product centric offering into an environmentally benign PSS Environmental impacts of the PSS concepts generated using LFD are then evaluated in comparison to that of the existing offering using simulated lifecycle assessment A semi structured interview is carried out to evaluate the utility and usability of LFD with the company personnel involved in the conceptual redesign process This licentiate thesis is an effort to effectively design the future research work of the author This future work will aim to support and establish generalizable scientific knowledge regarding the conceptual designing of resource efficient and effective PSSs

The Success Paradigm Michael E. Friesen, James A. Johnson, 1995-09-30 Organizations can accelerate the pace of quality improvements by ensuring that Total Quality efforts are driven from organizational strategy In the process of doing this a success paradigm can be created that allows different units of an

organization to work more effectively toward a shared purpose The significant examples presented here are the result of almost a decade of direct research and application in a very diverse set of organizations including Fortune 500 manufacturing and services firms non profit organizations health care organizations and public education The result is a specific process with enough detail for professional managers to read the book and implement the process in their own organizations CEOs and NPO professionals as well as business academics and upper level students should find significant examples in an array of industries and situations that make this reading especially worthwhile The approach described in this book centers around Critical Success Factors which Rockart introduced in 1979 It is a learning oriented approach to planning that the authors have implemented in a variety of settings including Boeing Air Midwest and Conway Hospital The important relationship between management control and strategic planning styles is discussed in several interesting chapters Another topic that the authors address is the reinventing of government and the feasibility of applying the process in that environment Several examples of governments who attempted the task are offered along with discussion of their level of success The approach described in this book is a powerful tool that can be used to develop a common vision in any organization
