Embryology Of The Baboon:

Embryology of the Baboon Andrew G. Hendrickx, Marshall L. Houston, 1971 **Embryology of the Baboon** Andrew G. Hendrickx, Embryology of the Baboon Andrew G. Hendrickx, 1971 The Embryology of the Common Marmoset I.R. Phillips, 2012-12-06 The primates represent a diverse group with the phylogenetic relationships of the various species reflected in their early embryonic development The members of the Tupaiidae Lemuridae and Lorisidae show great similarities to the lower mammals and even birds The Tarsiidae represent an intermediate step and the Platyrrhini and Catarrhini exhibit the greatest similarities to man During the period of embryogenesis the dimensions of an embryo are insufficient guide to its age and much more reliable information can be derived from a study of its external form and internal structure Examination of embryological specimens from a variety of simian species dates back to the early 1900 s but much of this material was collected in a haphazard way from animals shot in the wild Heuser and Streeter 1941 depicted a series of embryos of the rhesus monkey *Macaca mulatta* and correlated their gestational age with external form and size Streeter 1951 arranged human embryos between 24 1 and 47 1 days of post ovulation age into age groups or developmental horizons based on their external form and internal structure Each horizon was two days apart and numbered XI to XXIII The transition from embryo to fetus occurred at the end of horizon XXIII and was arbitrarily termed as the point where bone marrow invaded the cartilaginous precursor in the humerus The earlier stages I X have been termed subsequently Heuser and Corner 1957 O Rahilly 1973 **The Baboon in Biomedical Research** John L. VandeBerg, Sarah Williams-Blangero, Suzette D. Tardif, 2009-06-04 Nonhuman primates have played critical roles in biomedical research and they are among the few animals whose use in research continues to increase The scientific value of nonhuman primates derives from their close phylogenetic proximity to man and their consequent anatomic physiologic and genetic similarities to man Only nonhuman primates can provide adequate models for many complex physiological and disease processes of humans The baboon is a relative newcomer to the repertoire of nonhuman primates used in biomedical research However in less than 50 years since its first use in the U S it has become one of the most popular laboratory primate species It is larger than the other widely used monkey species making it advantageous for many types of experiments and technological developments It is extraordinarily hardy and highly fecund in captivity It closely resembles humans in a variety of physiological and disease processes such as cholesterol metabolism early stages of atherosclerosis and alcoholic liver disease Its chromosomes closely resemble those of humans and many genes of the two species lie in the same chromosomal order Among all primates baboons are the most widely used models for the genetics of susceptibility to complex diseases and they are the first nonhuman primate for which a framework genetic linkage map was established In addition the baboon genome is currently being sequenced and as a result the utility of this species for biomedical research will be dramatically increased *Baboon Embryo Culture as a Model for Primate Embryology* Valerie Z. Pope, 1985 **An Atlas for Staging Mammalian and Chick**

Embryos H. Butler, 2018-02-06 For the convenience of research workers particularly those with limited knowledge of embryology we have put together a series of tables to enable rapid identification of specific stages of embryonic development in the more commonly used mammals Because of its frequent usage the chick embryo is included in this atlas *In Vitro Fertilization and Embryo Transfer in Primates* Don P. Wolf, Richard L. Stouffer, Robert M. Brenner, 2012-12-06 It is a genuine honor and a privilege of distinction to provide the foreword for the proceedings that follow This marvelous symposium reflects the unique qualities of its two principal sponsors Whenever the Oregon Regional Primate Research Center is involved in matters of science we see a consistent record of exceptional quality in both the work and the people who do it Likewise Serono Symposia USA in assuring a world class speakers forum utterly without taint of commercial influence The proceedings published herein are a remarkable testimony not only to the contributors but to Drs Brenner Wolf Stouffer and Burnett who have shepherded its conception presentation and publication Readers will notice immediately one of the universal strengths of this total composition that is the diversity of investigational interests among attendees Presentations on the core topic of primate in vitro fertilization and embryo transfer were joined by specialist presentations in related areas including human assisted reproductive technologies reproductive physiology of the great apes sperm biology implantation mechanisms cryobiology coculture systems for embryogenesis micromanipulation technologies and genetic diagnosis of heritable diseases in the pre embryo Even though pro fertility issues understandably dominated this forum there was significant attention given to fertility control research especially the role of primates in this endeavor more on this subject below Endocrinology of Embryo—Endometrium Interactions Stanley R. Glasser, Joy Mulholland, Alexandre Psychoyos, 2012-12-06 Early embryonic loss is a continuing social and economic global problem In human populations the estimates of interruptions early in pregnancy range from 35-60% In animal husbandry swine ruminants fully 30% of pregnancies fail to survive early events of gestation The futility associated with this persistent high risk is even more unsettling because of advances made in assisted reproductive technology which although this very selective methodology has added to our knowledge of embryo endometrial interactions has resulted in a birth rate of only 14% These studies have instigated comparisons of the live relative contributions of the embryo and the uterus to the outcome of pregnancy These analyses have shown that we have learned significantly less about the role of the uterus in deciding the outcome of either natural or assisted pregnancies In 1979 a quotation by George Corner was used to set the tone of a meeting that was devoted to discussion of the cellular and molecular aspects of implantation In spite of the proliferation in research activity which occurred in the following 15 years our real understanding of the embryo transfer process has fallen short of our expectations We use the Corner quotation once again to preface this symposium so that we may recall that the fundamental nature of the process which regulates embryo endometrial interactions still escapes us The Mammalian Preimplantation Embryo Barry D. Bavister, 2012-12-06 With a few notable exceptions mammalian preimplantation embryos grown in vitro are likely to

exhibit sub optimal or retarded development This may be manifested in different ways depending on the species and on the stage s of embryonic development that are being examined For example bovine embryos often experience difficulty in cleaving under in vitro conditions and usually cease development at about the 8 cell stage Wright and Bondioli 1981 The block to development is stage dependent embryos cultured for 24 hr from the I cell stage are much more capable of developing into viable blastocysts after transfer to oviducts than embryos cultured for 24 hr from the 4 cell stage prior to transfer Eyestone et oZ 1985 Similar problems with in vitro embryo development are encountered in other species Pig embryos can be grown up to the 4 cell stage in vitro but usually no further Davis and Day 1978 In the golden hamster in the rat and in many outbred strains of mice development of zygotes in vitro is blocked at the 2 cell stage Yanagimachi and Chang 1964 Whittingham 1975 Even with some inbred mouse strains embryo development is reduced if very early cleavage stages are used as the starting point for in vitro culture Spielmann et oZ 1980 A common finding is that embryos grown in vitro have reduced cell counts Harlow and Quinn 1982 Kane 1985 and their viability is reduced Bowman and McLaren 1970

Romand,2012-12-02 Development of Auditory and Vestibular Systems is a collection of papers from noted scientists from different disciplines that discuss the state of advancement and perspectives on the development of auditory and vestibular function The book is divided into three parts Part I deals with the maturation and development of the different parts of the ear the development of hearing and the effects of harmful factors to its development Part II talks about the development of the vestibular system its embryogenesis and innervation and its pathological maturation The text is recommended for doctors especially those who specialize in otology and audiology and want to either be updated in the findings about the developments in the field or conduct studies regarding the developments of these senses **The Embryology of the**

Lesser Galago (Galago Senegalensis) Harry Butler,1983 **Primates** Kurt Benirschke,2012-12-06 This conference represents the first time in my life when I felt it was a misfortune rather than a major cause of my happiness that I do conservation work in New Guinea Yes it is true that New Guinea is a fascinating microcosm it has fascinating birds and people and it has large expanses of undisturbed rainforest In the course of my work there helping the Indonesian government and World Wildlife Fund set up a comprehensive national park system I have been able to study animals in areas without any human population But New Guinea has one serious drawback it has no primates except for humans Thus I come to this conference on primate conservation as an underprivileged and emotionally deprived observer rather than as an involved participant Nevertheless it is easy for anyone to become interested in primate conservation The public cares about primates More specifically to state things more realistically many people care some of the time about some primates Primates are rivaled only by birds pandas and the big cats in their public appeal For some other groups of animals the best we can say is

that few people care about them infrequently For most groups of animals no one cares about them ever **Proceedings**
 Clem Olin Miller,1966 *Kidney Development, Disease, Repair and Regeneration* Melissa Helen Little,2015-08-06 Kidney
 Development Disease Repair and Regeneration focuses on the molecular and cellular basis of kidney development exploring
 the origins of kidney lineages the development of kidney tissue subcompartments as well as the genetic and environmental
 regulation of kidney development Special coverage is given to kidney stem cells and possible steps towards kidney repair and
 regeneration Emphasis is placed on the fetal origins of postnatal renal disease and our current understanding of the
 molecular basis of damage and repair Biomedical researchers across experimental nephrology and developmental biology
 will find this a key reference for learning how the underlying developmental mechanisms of the kidney will lead to greater
 advances in regenerative medicine within nephrology Offers researchers a single comprehensive resource written by leaders
 from both the developmental biology and the experimental nephrology communities Focuses on understanding the molecular
 basis of organogenesis in the kidney as well as how this can be affected both genetically and environmentally Explains the
 underlying developmental mechanisms which influence the kidney s inherent repair capacity Demonstrates how a deeper
 understanding of mechanisms will lead to greater advances in regenerative medicine Embryo Implantation Daniel D.

 Primates in Biomedical Research provides a comprehensive up to date review of the use of nonhuman primates in biomedical
 research The Biology and Management volume provides basic information on the natural biology of nonhuman primates and
 the current state of knowledge regarding captive management Each chapter contains an extensive list of bibliographic
 references photographs and graphic illustrations to provide the reader with a thorough review of the subject Now in four
 color throughout making the book more visually stimulating to enhance learning and ease of use Fully revised and updated
 providing researchers with the most comprehensive review of the use of nonhuman primates in biomedical research
 Addresses commonly used nonhuman primate biomedical models providing researchers with species specific information
