

Emerald City

The emerald is North Carolina's state gem, and for good reason. North Carolina produces more emeralds than any other place in North America. In fact, the largest North American emerald crystal ever found was discovered in North Carolina.

Emeralds are the green form of a common mineral, beryl. Pure beryl is colorless. It becomes the blue-green stone called aquamarine when contaminated with iron. Emeralds can occur only when beryl contains chromium, a kind of "chemical accident" that turns beryl a beautiful green.
