Subcommittee on Energy, Natural Resources, and the Environment, 1970 **Physiology, Environment, and Man** Douglas H. K. Lee, David Minard, 2013-09-11 Physiology Environment and Man is based on a symposium conducted by the National Academy of Sciences National Research Council August 1966 While one might expect a textbook to present its field in organized and comprehensive fashion a symposium necessarily follows more of an illustrative pattern according to the personal interests or even idiosyncrasies of the participants It is interesting to note that in spite of these limitations the

presentations did in fact cover the range of physiological concerns with environmental effects from the genetic to the temporal and from the molecular to the holistic The book opens with a discussion of the National Academy of Sciences National Research Council's broad based critical study of the physiological underpinning of current concepts of biological responses to toxic chemicals and physical stresses Subsequent chapters deal with topics such as the metabolic fate of common environmental agents growth and trophic factors in carcinogenesis environmental factors in aging and mortality adaptation to heat and cold and the definition of an optimum environment

Social Aspects of Alcoholism Benjamin Kissin,Henri Begleiter,2013-06-29 The first three volumes of this series have dealt with materials which generally justify the title The Biology of Alcoholism This is only remotely true of the present volume Social Aspects of Alcoholism or of the final volume to come Treatment and Rehabilitation Except for small portions of the treatment section which involve pharmacotherapy much of these last two volumes deals with the psychological aspects of alcoholism and still more with the social It is interesting to review the evolution of this new pattern over the past seven years a pattern which had it existed initially would have resulted if not in a different format at least in a different title Our initial selection of areas to be covered was influenced by our desire to present as hard data as possible in an attempt to lend a greater aura of scientific rigor to a field which was generally considered as soft When we completed our review of this material in volumes 1 3 we recognized that what we might have gained in rigor we had more than lost in completeness These volumes presented a picture of a biological disease syndrome for which the remedies and preventive measures were presumably also biological And yet most workers in the field readily accept the significant contributions of psychological and social factors to the pathogenesis and treatment of alcoholism
