BPA and more *Setting Priorities for Drinking Water Contaminants* National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Drinking Water Contaminants, 1999-01-02

The provision of safe drinking water has been an important factor in the improvement of the health status of U S communities since the turn of the last century Nonetheless outbreaks of waterborne disease and incidences of chemical contamination of drinking water continue to occur *Setting Priorities for Drinking Water Contaminants* recommends a new process for the U S Environmental Protection Agency to use in deciding which potential drinking water contaminants should be regulated in public water supplies to provide the greatest protection against waterborne illnesses The book covers chemical and microbiological contaminants and includes a historical review of past approaches to setting priorities for drinking water contaminants and other environmental pollutants It emphasizes the need for expert judgment in this process and for a conservative approach that considers public health protection as the first priority Defense Health Care: Issues Related to Past Drinking Water Contamination at Marine Corps Base Camp Lejeune Marcia Crosse, 2007-11 In the 1980s volatile organic compounds VOC were discovered in the water on Marine Corps Base Camp Lejeune Exposure to certain VOCs may cause adverse health effects incl cancer The Agency for Toxic Sub 2 the provision of funding 3 an assessment of the design of the current ATSDR study Illustrations Reviews of Environmental Contamination and Toxicology George W. Identifying Future Drinking Water Contaminants National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, 1998 Workshop on Emerging Drinking Water Contaminants, 1999-08-30 With an increasing population use of new and diverse chemicals that can enter the water supply and emergence of new microbial pathogens the U S federal government is faced with a regulatory dilemma Where should it focus its attention and limited resources to ensure safe drinking water supplies for the future *Identifying Future Drinking*

Water Contaminants is based on a 1998 workshop on emerging drinking water contaminants. It includes a dozen papers that were presented on new and emerging microbiological and chemical drinking water contaminants, associated analytical and water treatment methods for their detection and removal, and existing and proposed environmental databases to assist in their proactive identification and regulation. The papers are preceded by a conceptual approach and related recommendations to EPA for the periodic creation of future Drinking Water Contaminant Candidate Lists. CCLs produced every five years include currently unregulated chemical and microbiological substances that are known or anticipated to occur in public water systems and that may pose health risks.

Principles and Practice of Environmental Medicine A.B. Tarcher, 2013-11-11 Throughout the world, scientists and the general public are concerned about the adverse effects of environmental agents. Part II presents an overview of public concern about the adverse effects of chemical and physical agents commonly found in contaminated air, water, food, and soil. In the past, attention has focused on hazardous wastes, but the problem of hazardous agents originating in the workplace is also discussed. As a consequence, Part III characterizes the body's defense against occupational agents; occupational medicine has become a well-recognized discipline. Much less attention has been paid to nonoccupational hazards. There is a growing awareness, however, of the dangers of environmental agents. Part IV indicates the importance of including occupational and environmental exposure in the routine medical history of the patient, especially for the fetus, the infant, the very young, and the elderly. The role of the elderly and the chronically ill in enhanced susceptibility as a factor in an individual's susceptibility to environmental agents is discussed. Environmental medicine focuses on the response to toxic exposure. Understanding Environmental Pollution Marquita K. Hill, 2010-04-22 The third edition of this well-received textbook delivers a concise overview of global and individual environmental pollution for undergraduate courses, presenting students with the tools to assess environmental issues. With more than thirty percent new material, Hill assesses pollution from an international perspective, including air and water pollution, global warming, energy, solid and hazardous waste, and pollution at home. Both the sources and impacts of pollution are addressed, as well as governmental, corporate, and personal responsibility for pollution and pollution prevention. Non-technical language encourages greater understanding of these often complex issues, and

thought provoking Delving Deeper exercises are included increasing engagement with the text and enabling students to apply what they have learned A new chapter on the chemistry basics of pollution links to sections on toxicology and risk assessment helping students understand concerns over chemicals and their regulation An essential review of environmental pollution for environmental science students

Contaminants,2001-09-01 Americans drink many gallons of tap water every day but many of them question the safety of tap water every day as well In fact devices have been created to filter tap water directly before reaching cups It s true however that the provision and management of safe drinking water throughout the United States have seen triumphs in public health since the beginning of the 20th century Although advances in water treatment source water protection efforts and the presence of local state and federal regulatory protection have developed over the years water in the United States still

contain chemical microbiological and other types of contaminants at detectable and at times harmful levels This in addition to the growth of microbial pathogens that can resist traditional water treatment practices have led to the question Where and how should the U S government focus its attention and limited resources to ensure safe drinking water supplies for the future To deal with these issues the Safe Drinking Water Act SDWA Amendments of 1996 Safe included a request that the U S Environmental Protection Agency EPA publish a list of unregulated chemical and microbial contaminants and contaminant groups every five years that are or could pose risks in the drinking water of public water systems The first list called the Drinking Water Contaminant Candidate List CCL was published in March 1998 The main function of the CCL is to provide the basis for deciding whether to regulate at least five new contaminants from the CCL every five years However since additional research and monitoring need to be conducted for most of the contaminants on the 1998 CCL the list is also used to prioritize these related activities Classifying Drinking Water Contaminants for Regulatory Consideration is the third report by the Committee on Drinking Water Contaminants with the purpose of providing advice regarding the setting of priorities among drinking water contaminants in order to identify those contaminants that pose the greatest threats to public health The committee is comprised of 14 volunteer experts in water treatment engineering toxicology public health epidemiology water and analytical chemistry risk assessment risk communication public water system operations and microbiology and is jointly overseen by the National Research Council's NRC's Water Science and Technology Board and Board on Environmental Studies and Toxicology In this report the committee needed to readdress its second report as well as explore the feasibility of developing and using mechanisms for identifying emerging microbial pathogens for research and regulatory activities The promotion of public health remains the guiding principle of the committee's recommendations and conclusions in this report
