**Hazards, Risks, and Disasters in Society** Andrew E. Collins, Jones Samantha, Bernard Manyena, Janaka Jayawickrama, 2014-11-21 Hazards Risks and Disasters in

Society provides analyses of environmentally related catastrophes within society in historical political and economic contexts. Personal and corporate culture mediates how people may become more vulnerable or resilient to hazard exposure. Societies that strengthen themselves or are strengthened mitigate decline and resultant further exposure to what are largely human induced risks of environmental social and economic degradation. This book outlines why it is important to explore in more depth the relationships between environmental hazards risk and disasters in society. It presents challenges presented by mainstream and non mainstream approaches to the human side of disaster studies. By hazard categories this book includes critical processes and outcomes that significantly disrupt human wellbeing over brief or long time frames. Whilst hazards risks and disasters impact society individuals groups institutions and organisations offset the effects by becoming strong healthy resilient caring and creative. Innovations can arise from social organisation in times of crisis. This volume includes much of use to practitioners and policy makers needing to address both prevention and response activities. Notably as people better engage prevalent hazards and risks they exercise a process that has become known as disaster risk reduction DRR. In a context of climatic risks this is also indicative of climate change adaptation CCA. Ultimately it represents the quest for development of sustainable environmental and societal futures. Throughout the book cases studies are derived from the world of hazards risks and disasters in society. Includes sections on prevention of and response to hazards risks and disasters. Provides case studies of prominent societal challenges of hazards risks and disasters. Innovative approaches to dealing with disaster drawing from multiple disciplines and sectors.

Landscape Ecology for Sustainable Society Sun-Kee Hong, Nobukazu Nakagoshi, 2018-03-23. The research category of the landscape ecology which researches the structure functions and the spatio temporal changes of the ecological landscapes has now been contributing to the human life and the shifts of the socio economic paradigm. Global warming has been influencing the universal life patterns of the mankind which have been maintained in the past several hundreds of years. And it has been having the influences on the international social problems and economic problems. Although the diverse plans for adapting to the climate changes have been the topics of the conservations among the ecologists internationally it is the reality that the speed of the changes of the environment has been quicker than the time it takes to complete the solutions. In order to maintain the sustainable earth and the sustainable society the role of the landscape ecology has been coming to the fore. Especially the theories and the methodologies of the landscape ecology have been applied to the multidisciplinary researches by going beyond the research category of ecology including the maximization of the efficiencies of the land spaces the management of the ecological space habitats in which the biological diversity can be maintained the utilization of the resources that are absolutely needed by the human beings. Here it is compressed to water energy and food etc and until reaching the human society. It is considered that to that extent the utilizations and the applications of the landscape ecology are very much needed for the diagnoses and the evaluations of the global environmental problems which have been proceeded with rapidly in the modernity. This book is not comprised of any

general remarks that explain the theories and the methods of the landscape ecology Already based on the basic theories of the landscape ecology the writers have conducted the investigations on the farm villages the cities and the coastal ecosystems And through the space analyses and interpretations the structure and functions of the landscapes were analyzed Of course in this book too the diverse ecosystems and the landscape ecological methodologies regarding the land use have been presented However the core of this book focuses more on what role the landscape ecology must play for the materialization of a sustainable society in the future At the farm villages the sustainable agriculture will be presented and at the cities the discussions on the green networks and the energies will be proceeded with Also regarding the coasts and the seas a thesis on the safety of the life zones of the residents adjacent to the sea and on the conservation of the island ecosystems will be presented The sustainable society is a system that is formed by having the sustainable development as a basis It is considered to be one aspect within a kind of a sustainable process with regard to which the natural world and the human world coexist and are in a symbiotic relationship harmoniously In order to maintain the biodiversity the reasonable adjustments of the human activities like the use of the resources are absolutely needed Without the biological resources the cultural diversity of the human beings too cannot exist Consequentially recently and internationally there are a lot of the case examples that express the biocultural diversity by linking the biological diversity with the cultural diversity In this book the role of the landscape ecology as an academic link which can connect the two possible if possible is highly expected It is indeed the biocultural landscape It can be said that this concept also is the interconnection of the multidisciplinary spaces that must be dealt with in the modern landscape ecology Through this book it is intended to present a new directionality which can contribute to the sustainable society at the same time as the organization of the theories and the methods of the landscape ecology

Society and Nature Peter Dickens, 1992 In this wide ranging effort to theorize about the relationships between society and nature Peter Dickens attempts to reconstruct social theory in a way that enables it to speak to contemporary environmental issues After reviewing existing sociological traditions he draws on the early work of Karl Marx to suggest that processes and relations in the workplace are the main source of people's separation from nature In addition people's understanding of nature tends to mirror their experience of the social world Redefining the work of Anthony Giddens in an ecological direction Dickens analyzes developments in biological thinking that seem consistent with this approach He considers the role of culture and he critiques the contemporary deep green and deep ecology movements Focusing on the alienation of human beings from the natural world and the place of nature in their deep mental structures the author works in part from a Marxist perspective but draws a wide variety of social psychological and biological theories into the discussion Society and Nature not only addresses a central debate in contemporary social science regarding this interrelationship but also responds to the intellectual challenge presented by natural scientific concepts of environmental problems that oversimplify or ignore their political or social relational dimensions Author note Peter Dickens is Senior

Lecturer in Urban Studies and Social Policy at the University of Sussex UK and the author of Urban Sociology Society Locality and Human Nature      **Education, Disordered Eating and Obesity Discourse** John Evans, Emma Rich, Brian Davies, Rachel Allwood, 2008-06-06 Eating less exercising more and losing weight seem the obvious solution for the oncoming obesity epidemic Rarely however is thought given to how these messages are interpreted and whether they are in fact inherently healthy Education Disordered Eating and Obesity Discourse investigates how body centred talk about weight fat food and exercise is recycled in schools enters educational processes and impacts on the identities and health of young people Drawing on the experiences of young women who have developed eating disorders and research on international school curricula and the media the authors challenge the veracity substance and merits of contemporary obesity discourse By concentrating on previously unexplored aspects of the debate around weight and health it is revealed how well meaning advice can propel some children toward behaviour that seriously damages their health This book is not only about eating disorders and the people affected but the effects of obesity discourse on everyone s health as it enters public policy educational practice and the cultural fabric of our lives It will interest students teachers doctors health professionals and researchers concerned with obesity and weight issues      Research Anthology on Supporting Healthy Aging in a Digital Society Management Association, Information Resources, 2022-02-04 In today s rapidly evolving society there has been an increase in technologies and systems available to support the elderly throughout various aspects of life We have come a long way in the quality of life we can offer our aging populations in recent years due to these technological innovations medical advancements and research initiatives However further study of these developments is crucial to ensure they are utilized to their utmost potential in securing a healthier elderly population The Research Anthology on Supporting Healthy Aging in a Digital Society discusses the current challenges of aging in the modern world as well as recent developments in medicine and technology that can be used to improve the quality of life of elderly citizens Covering a wide range of topics such as smart homes remote healthcare and aging in place this reference work is ideal for healthcare professionals gerontologists therapists government officials policymakers researchers academicians practitioners scholars instructors and students
