

Golden Sequence: A Meditation

Sarah Law

The following is a creative piece inspired by my academic research into the life and thought of Evelyn Underhill, and using, in the right hand column, quotations from Underhill's own book *The Golden Sequence* (London 1932), a late work that was a meditation on the well-known hymn of this name to the Holy Spirit. I hope to have conveyed from the citations (which are not in linear order) the sense of the infinite and the universal that Underhill derived from contemplation of particulars, and of vivid and 'homely' metaphors (in the manner of Julian of Norwich, to whom Underhill refers), which seems to be a recurring emphasis in feminine, and mystical, spirituality. My own creative meditation is on the left hand column of the text, as I wanted, rather in the manner of Kristeva's *Stabat Mater*, to disrupt the conventional pattern of straightforward reading and stimulate creative links between my words and Underhill's.

The autobiographical information on Underhill from which I draw is mostly contained in her biography by Christopher Armstrong.¹ Before she began her career as a spiritual writer and director within the Anglican Church, Underhill experimented with eclectic spiritual groups, and used some of the experience she gained to write her three novels. In this early fiction, Underhill examined concepts such as other time- and space- zones, and, occasionally, a poetic and rhythmical use of language in order to access mystical consciousness. These ideas have also been of great interest to later feminist critics, particularly Kristeva.² I hope to have reflected their spiritual potential in my piece. During her brief time as a member of the Order of

foregrounds the life struggles of an individual Brenda in such a way that argument and theoretical exploration arise organically out of experience The frustration of the title is traced to avoidant attachment pretending not to need others In Brenda this is associated with a body energy pattern that is both over charged and over contained generating a self frustrating process Such a repressive defence works against her so that she experiences her life as dry soulless and uncreative A variety of existential difficulties are traced to how such core developmental issues interact with our socio cultural environment A way forward is outlined play and finding meaning are identified as transformational hubs that bring wellbeing into Brenda s life and restore her capacity for experiencing **Depression and the Erosion of the Self in Late**

Modernity Barbara Dowds, 2018-04-19 Depression is not a disease of the brain a genetic disability or even a mood disorder Rather shutdown numbness or sadness are non pathological adaptations to adverse childhood and adult environments This challenging book thus understands depression as a wise response to an unliveable situation It can teach us what is wrong with our lives and what we must learn in order to go beyond symptom relief and reconnect to our most fundamental needs relational existential and spiritual Because moods shape how we engage with our outer and inner worlds they underlie all human behaviour If the sociocultural world is toxic or frustrates our core needs we will withdraw to protect ourselves Those who have encountered a non facilitating environment in childhood will be even more sensitive to adult stresses since their self organisation is fragile and non resilient As depression is so complex understanding it demands an integrative approach

Cradling the Chrysalis E. Mary Sullivan, Harriett Goldenberg, 2003-01-01 This book addresses the underlying philosophy and rationale for the training of psychotherapists How can training prepare prospective psychotherapists and counsellors for a task whose practitioners cannot even agree as to whether it is a science or an art an impersonal clinical interaction or a profoundly humane even spiritual encounter The authors argue for an understanding of psychotherapy training as a process which closely parallels that of therapy itself *The Creative Arts in Dementia Care* Jill Hayes, Sarah Povey, 2010-09-15 The physical care of people with dementia is of vital importance but so too is their emotional social mental and spiritual wellbeing Encouraging those who care for people with dementia to develop their own creative skills this book provides a creative map of care with easy to follow examples and detailed case studies **Depression** Barbara Dowds, 2021-04-19 This book attempts to do justice to the depth and complexity of depression as to its causes and its treatment in psychotherapy It challenges the reductive medical view of depression as a serotonin deficiency resulting in a collection of undesirable symptoms to be dispatched with antidepressants or CBT exercises Rather it locates the origins of depression in childhood adversity primarily caused by unattuned cold critical hostile or abusive caregiving Insecure attachment interacts with other elements of a stressful life history as well as with genetic makeup to pave the way for depression Such a childhood has long term impacts on the setting of the stress and threat responses of the nervous system Depression fundamentally indicates a weak and non resilient sense of self coupled with limited capacities for trust and either autonomy or intimacy in relationships These are the issues that must be tackled in psychotherapy Since depression carries a message for the sufferer it must be investigated for its meaning Why has the individual withdrawn from life and what are they being asked to change in how they live and relate Before this reparative and creative phase of therapy can begin however we must remember that depression is not just low mood but also stuck mood Rigid beliefs and processes that block therapeutic engagement can be gently questioned by helping the client see that they are held by only one part of the self whereas other for growth parts carry hope and a willingness to play and explore Overall it is crucial in working with depression to see and to relate to the client as a whole person not simply a bundle of cognitive shortcomings to be corrected but as an emotional organismic relational existential and spiritual being *Depression An Introduction* presents a

biopsychosocial model combining developmental and attachment perspectives with genetics and neurobiology Its therapeutic orientation is humanistic and integrative but has much to offer anyone wanting to know more about this widely known but little understood condition

Psychology for Cognitive Behaviour Therapy Kieron P. O'Connor, 2015-02-11 Most clinical psychologists and cognitive behaviour therapists adopt a perspective which assumes that a client's distress arises from inaccurate perceptions of the external world and that these perceptions are due to the problematic filtering of information about the external world through internal perceptual biases and schemas A Constructionist Clinical Psychology for Cognitive Behavioural Therapy provides a timely and innovative critique of the dominant trends in CBT theory and practice It applies a constructionist framework to treatment and offers a constructionist philosophy and methodology to complement existing clinical approaches in cognitive behaviour therapy Kieron O'Connor presents a much needed alternative constructionist framework addressing both individual and social constructionist ideas which is laid out in a clear fashion for the clinician He shows how the framework can be integrated into practice and offers an alternative to viewing psychopathology as an isolated problem which focuses on pathology as a response to internal or external events He reveals how the new constructionist framework can encourage clinicians to look at the client centred context which creates psychopathology and explore areas and experiences not easily accessible to traditional cognitive behaviour approaches but which are rendered understandable through a constructionist approach to experience Using extensive case studies A Constructionist Clinical Psychology for Cognitive Behavioural Therapy provides a constructionist framework approach which complements existing CBT approaches and shines new light on questions as to why some techniques work and others do not With new tools for case formulation and evaluation and trainee exercises for beginners the book will appeal to clinical psychologists clinical researchers psychotherapists and other health and mental health professionals *Advances in Sport Psychology* Thelma S. Cohen,2013-12-11 It has been 15 years since the original publication of Neuropsychology of Attention At the time of its publication attention was a construct that had long been of theoretical interest in the field of psychology and was receiving increased research by cognitive scientists Yet attention was typically viewed as a nuisance variable a factor that needed to be accounted for when assessing brain function but of limited importance in its own right There is a need for a new edition of this book within Neuropsychology to present an updated and integrated review of what is know about attention the disorders that affect it and approaches to its clinical assessment and treatment Such a book will provide perspectives for experimental neuropsychological study of attention and also provide clinicians with insights on how to approach this neuropsychological domain
