Janardhan Reddy, 2006-02-10 Biologists worldwide now speak the scientific language of molecular biology and use the same molecular tools Interest is growing in the molecular biology of abiotic stress tolerance and modes of installing better tolerant mechanisms in crop plants Current studies make plants capable of sustaining their yields even under stressful conditions Further this information may form the basis for its application in biotechnology and bioinformatics      **Exercise and Sport Science** William E. Garrett, Donald T. Kirkendall, 2000 Written by experts in exercise physiology exercise science and biomechanics this volume focuses specifically on exercise science in relation to athletic performance and to the diagnosis management and prevention of athletic injuries The text is logically organized into sections on energy metabolism exercise physiology organ system responses to exercise general concerns in applied exercise science sports biomechanics and applied sports physiology The biomechanics and sports physiology sections focus on particular sports to determine specific diagnosis and treatment aspects The book also includes chapters on exercise in children and the elderly environmental influences on physical performance overtraining chronobiology and microgravity      Climate Change and Plant Abiotic Stress Tolerance Narendra Tuteja, Sarvajeet S. Gill, 2013-10-30 In this ready reference a global team of experts comprehensively cover molecular and cell biology based approaches to the impact of increasing global temperatures on crop productivity The work is divided into four parts Following an introduction to the general challenges for agriculture around the globe due to climate change part two discusses how the resulting increase of abiotic stress factors can be dealt with The third part then outlines the different strategies and approaches to address the challenge of climate change and the whole is rounded off by a number of specific examples of improvements to crop productivity With its forward looking focus on solutions this book is an indispensable help for the agro industry policy makers and academia      Physiology of Stressed Crops, Vol. 5 U S Gupta, 2024-11-01 Though plant cells are separated by cell walls cells maintain their identity as they are delimited by semi permeable membranes that permit them to function as autonomous units The flow of materials in and out of the cell is regulated by channels transporters pumps and aquaporins in these membranes The cytoplasm is sandwiched between two membranes the plasma membrane which forms the outer boundary of the cytoplasm and the tonoplast or the vacuolar membrane which forms the inner boundary Cell membranes serve several different functions form boundaries and provide compartmentalization site of chemical reactions catalyzed by membrane proteins regulate the exchange of ions compounds across the barrier site of perception transmission of signals hormones and act in cell to cell communication The membrane functions are affected by different abiotic biotic stress not discussed nutritional edaphic and mechanical stresses which have been discussed in this volume in light of the recent literature      **Human Adaptation and Accommodation** A.
