Organization with Incomplete Information Mukul Majumdar, Roy Radner, 1998-09-13 There have been systematic attempts over the last twenty five years to explore the implications of decision making with incomplete information and to model an economic man as an information processing organism These efforts are associated with the work of Roy Radner who joins other analysts in this collection to offer accessible overviews of the existing literature on topics such as Walrasian equilibrium with incomplete markets rational expectations equilibrium learning Markovian games dynamic game theoretic models of organization and experimental work

on mechanism selection Some essays also take up relatively new themes related to bounded rationality complexity of decisions and economic survival The collection overall introduces models that add to the toolbox of economists expand the boundaries of economic analysis and enrich our understanding of the inefficiencies and complexities of organizational design in the presence of uncertainty

MacMillan, Kyeong Seok Han, 2007-12-27 With the rise of the knowledge economy the knowledge content of goods and services is going up just as their material content is declining Economic value is increasingly seen to reside in the former that is in intangible assets rather than in the latter Yet we keep wanting to turn knowledge back into something tangible something with definite boundaries which can be measured manipulated appropriated and traded In short we want to reify knowledge Scholars have been debating the nature of knowledge since the time of Plato Many new insights have been gained from these debates but little theoretical consensus has been achieved Through six thematically linked chapters the book articulates the theoretical approach to the production and distribution of knowledge that underpins Max Boisot's conceptual framework the Information Space or I Space In this way the book looks to provide theoretical and practical underpinnings to Boisot's book *Knowledge Assets* OUP 1998 Following an introductory chapter how knowledge relates to data and information is first examined in chapter 1 and how different economic actors entrepreneurs managers etc use knowledge as a basis for action is explored in chapter 2 Chapter 3 looks at how the heterogeneity of economic actors arises naturally from their respective data processing strategies in spite of any similarities in the data that they might share Chapter 4 argues contra much transaction based economics that an organizational order must have preceded a market order something that should be reflected in any knowledge based theory of the firm Chapter 5 discusses the cultural and institutional significance of different kinds of knowledge flows Finally chapter 6 presents an agent based simulation model SimISpace that illustrates how the I Space might be applied to concrete problems such those of intellectual property rights A concluding chapter proposes a research agenda based on the theorizing developed in the book The approach the book sets out is used by a whole range of organizations to issues of knowledge management policy economics and organizational and cultural change
