Population Medicine and Health Economics Simiao Chen,An Pan,Till Bärnighausen,Chen Wang ,Qiushi Chen,2024-10-04 Population medicine is an emerging medical discipline that aims to maximize aggregate and long term population health by mobilizing accessible resources through its five care responsibilities prevention diagnosis control treatment and recovery integrating and applying knowledge principles and technologies of modern medicine and related disciplines coordinating individual health behaviors and collective health actions and serving as the medical foundation of public health practices Population health economics is important in population medicine and public health Since resources are limited in order to maximize the aggregate and long term population health benefit we must produce and allocate resources in an effective and efficient manner The value of healthcare interventions are often underestimated and health resources are mostly insufficient The broader social and economic values of healthcare interventions are frequently ignored It is important that we distribute health resources wisely and maximize efficiencies at all three levels micro meso and macro levels Thus this Research Topic focuses on how population health economics as both a key method and a value can help population medicine practitioners to provide better and more efficient care to the population they serve

The Routledge Handbook of the Political Economy of Health and Healthcare David Primrose,Rodney D. Loepky,Robin Chang,2024-02-28 This handbook provides a comprehensive and critical overview of the gamut of contemporary issues around health and healthcare from a political economy perspective Its

contributions present a unique challenge to prevailing economic accounts of health and healthcare which narrowly focus on individual behaviour and market processes. Instead, the capacity of the human body to reach its full potential and the ability of society to prevent disease and cure illness are demonstrated to be shaped by a broader array of political economic processes. The material conditions in which societies produce, distribute, exchange, consume and reproduce, and the operation of power relations therein, influence all elements of human health, from food consumption and workplace safety to inequality, healthcare and housing, and even the biophysical conditions in which humans live. This volume explores these concerns across five sections. First, it introduces and critically engages with a variety of established and cutting edge theoretical perspectives in political economy to conceptualise health and healthcare from neoclassical and behavioural economics to Marxist and feminist approaches. The next two sections extend these insights to evaluate the neoliberalisation of health and healthcare over the past 40 years, highlighting their individualisation and commodification by the capitalist state and powerful corporations. The fourth section examines the diverse manifestation of these dynamics across a range of geographical contexts. The volume concludes with a section devoted to outlining more progressive health and healthcare arrangements which transcend the limitations of both neoliberalism and capitalism. This volume will be an indispensable reference work for students and scholars of political economy, health policy and politics, health economics, health geography, the sociology of health, and other health related disciplines. Chapters 1-8 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons CC BY-NC-ND 4.0 license.
