*ECotoxicology: Ecological Dimensions* D.J. Baird,P.E. Douben,P. Greig-Smith,L. Maltby,2013-03-13 Ecotoxicology is a relatively new scientific discipline Indeed it might be argued that it is only during the last 5 10 years that it has come to merit being regarded as a true science rather than a collection of procedures for protecting the environment through management and monitoring of pollutant discharges into the environment The term ecotoxicology was first coined in the late sixties by Prof Truhaut a toxicologist who had the vision to recognize the importance of investigating the fate and effects of chemicals in ecosystems At that time ecotoxicology was considered a sub discipline of medical toxicology Subsequently several attempts have been made to portray ecotoxicology in a more realistic light Notably both Moriarty 1988 and F Ramade 1987 emphasized in their books the broad basis of ecotoxicology encompassing chemical and radiation effects on all components of ecosystems In doing so they and others have shifted concern from direct chemical toxicity to humans to the far more subtle effects that pollutant chemicals exert on natural biota Such effects potentially threaten the existence of all life on earth Although I have identified the sixties as the era when ecotoxicology was first conceived as a coherent subject area it is important to acknowledge that studies that would now be regarded as ecotoxicological are much older
