FitzGerald,Zoe J. Hughes,2021-04-22 Salt marshes are highly

dynamic and important ecosystems that dampen impacts of coastal storms and are an integral part of tidal wetland systems which sequester half of all global marine carbon. They are now being threatened due to sea level rise, decreased sediment influx, and human encroachment. This book provides a comprehensive review of the latest salt marsh science investigating their functions and how they are responding to stresses through formation of salt pannes and pools, headward erosion of tidal creeks, marsh edge erosion, ice fracturing, and ice rafted sedimentation. Written by experts in marsh ecology, coastal geomorphology, wetland biology, estuarine hydrodynamics, and coastal sedimentation, it provides a multidisciplinary summary of recent advancements in our knowledge of salt marshes. The future of wetlands and potential deterioration of salt marshes is also considered, providing a go-to reference for graduate students and researchers studying these coastal systems as well as marsh managers and restoration scientists.

Water Resources Research Catalog, 1966 *The Development of an Aquatic Habitat Classification System for Lakes* W.D.N. Busch, 2018-01-18 In the context of freshwater fisheries changing their strategies from the regulation of harvest and the enhancement of populations to the creation and protection of habitats and the management of ecosystems moves toward establishing an aquatic habitat classification system. Eight papers from the February 1988 Symposium on the Classification and Inventory of Great Lakes Aquatic Habitats, the last in a series of Great Lakes Symposia, propose various classification approaches, most using a limited number of physical, chemical, and/or biological variables to produce some form of index. They also include overviews and summaries of the classification process.

Human Impacts on Salt Marshes Brian R. Silliman, Edwin D. Grosholz, Mark D. Bertness, 2009-06-03 *Human Impacts on Salt Marshes* provides an excellent global synthesis of an important underappreciated environmental problem and suggests solutions to the diverse threats affecting salt marshes.

Peter B. Moyle, University of California, Davis *Restoration of Ecosystems - Bridging Nature and Humans* Stefan Zerbe, 2023-02-13 In this interdisciplinary textbook which bridges the gap between the natural and social sciences, both the scientific principles of restoration ecology and practical aspects of ecosystem restoration are comprehensively presented. The diversity of land use types with a focus on Central Europe is highlighted, and case studies of practical restoration projects are presented. The textbook offers students who deal with the environment as well as scientists and practitioners a profound and up-to-date but also critical overview of the state of knowledge. This book opens up the broad spectrum of degraded ecosystems of Central European natural and cultural landscapes. In further chapters, marine ecosystems and their restoration as well as development potentials and the limits of restoration are discussed in more detail. The ecological fundamentals are expanded through an interdisciplinary perspective taking into account environmental ethics, sociology, anthropology, and economics. In addition to an up-to-date overview of the various areas and fields of activity in restoration ecology and ecosystem restoration, the textbook provides a valuable basis for studies, science, and practice. The students also receive assistance in searching for literature and critical fact analysis, and the lecturers on teaching formats and interdisciplinary approaches to discussion in restoration ecology.
