Ecology Of Tropical Lakes And Rivers:

The Ecology of Tropical Lakes and Rivers A. I. Payne, 1986-09-17 A self contained text reviewing tropical limnology Discusses a number of communities in detail including plankton benthic regions and the water margins Introduces the characteristic types and assemblies of animals and plants from tropical communities The measurement and relative magnitude of such quantifiable aspects as abundance biomass primary production secondary production and decomposition are all outlined drawing together the diverse threads of freshwater ecology over one of the earth s climatic belts Deals with use and abuse of water in the tropics and looks at problems of diversity and diversification in tropical waters

The Lakes Handbook Patrick O'Sullivan, C. S. Reynolds, 2008-04-15 Continuing concern about water supply and quality ecosystem sustainability and restoration demands that the modern approach to the management of lakes and reservoirs should be based on a sound understanding of the application of the scientific and ecological principles that underlie freshwater processes The Lakes Handbook provides an up to date overview of the application of ecologically sound approaches methods and tools using experience gained around the world for an understanding of lakes and their management Volume one of the Handbook addresses the physical and biological aspects of lakes pertinent to lake management emphasising those aspects particularly relevant to large still bodies of water Volume two then considers lake management with particular emphasis on sustainability restoration and rehabilitation This handbook will be invaluable to ecologists environmental scientists physical geographers and hydrologists involved in limnological research as well as advanced undergraduate and graduate students looking for authoritative reviews of the key areas of limnological study

River and Stream Ecosystems of the World Colbert E. Cushing, Kenneth W. Cummins, G. Wayne Minshall, 2006-02-06 This is a synopsis and review of the major rivers of the world

East African Ecosystems and Their Conservation T. R. McClanahan, T. P. Young, 1996 East Africa is one of the most diverse and interesting tropical area on the planet It is home not only to the last great megafaunal assemblage but also to human populations with the highest growth rates This book draws on the expertise of leading ecologists each intimately familiar with a particular set of East African ecosystems to provide the first in depth and integrated account of the ecology management threats and conservation of these diverse ecosystems Summarizing the tremendous wealth of scientific research that has come out of East Africa in the last few decades each chapter analyses a given ecosystem type taking the reader through the basics of its ecology its historical use and misuse by humans and its prospects for conservation Throughout the book linkages and similarities among ecosystems are emphasized the historical and contemporary role of humans in shaping these ecosystems is considered fundamental principles of ecology are considered and interesting case studies are highlighted Students and researchers in ecology conservation biology and environmental sciences will find this book useful in their work

Phytoplankton in Turbid Environments: Rivers and Shallow Lakes J.-P. Descy, Colin S. Reynolds, Judit Padišák, 2013-04-17 The ecology of potamoplankton has received less attention than lake plankton These proceedings

produce a synthesis of the composition community structure and dynamics of lotic phytoplankton which are intuitively submitted to a strong physical control in the flowing environment perceived as much more disturbed than a lake even than a well mixed shallow one It turns out that the boundary between the phytoplankton of rivers and lakes is not as clear cut as was thought In particular most contributions provide arguments emphasizing the prominent role of physical control in both aquatic systems especially due to the steep light gradient resulting from turbulent mixing in a turbid water column Similarities and differences between potamoplankton and limnoplankton largely based on the information gathered by the contributors are discussed in the introductory paper by Reynolds et al

Ecohydrology & Hydrobiology, 2001 The international journal Ecohydrology target ecological principle necessity of enhancing ecosystem absorbing capacity and ecosystem services and management tool ecological engineering the use of ecosystem properties for regulation the interplay between hydrology and biota The journal encourages the submission of manuscripts which adopt an integrative approach to aquatic sciences explaining ecological and hydrological processes at a river basin scale or propose practical applications of this knowledge It will also consider papers in other hydrobiological fields Especially welcome are papers on regulatory mechanism within biocenosis and the resistance and resilience of freshwater and costal zones ecosystems There is no page charge for published papers All submitted papers written exclusively in English should be original works unpublished and not under consideration for publication elsewhere All papers are peer reviewed The following types of papers are considered for publication in E H original research papers invited or submitted review papers short communications

The Rivers of Florida Robert J. Livingston, 2012-12-06 This book addresses basic questions concerning the ecological relationships and current conditions of the major river systems in Florida There have been relatively few comprehensive studies made of the rivers of Florida There is to be sure voluminous information that addresses various aspects of riverine ecology However little such information has been collected in a way that allows even a preliminary understanding of the driving forces that determine how the diverse freshwater and associated brackish systems function This lack of useful data is the product of a fundamental ignorance concerning the scale of endeavor both spatially and temporally that is needed if we are to understand and parenthetically manage the major drainage systems of this area of the country Livingston 1987 Research used to address management problems should entail a continuous series of interrelated studies descriptive and experimental that answer the immediate and often less important questions that are asked on a day to day basis The research should also be designed to answer questions that have not yet been asked In other words ecosystem research should be organized on an appropriate scale so that system wide processes are understood and pr

An International Perspective on Wetland Rehabilitation W.J. Streever, 2012-12-06 Bill Streever author of Bringing Back the Wetlands and numerous technical articles about wetland restoration and creation worked for two years to bring together this collection of papers Authors ranging from private landowners to government managers to scientists present regional overviews case studies and discussions of various issues

Regional overviews cover areas as small as the Commonwealth of the Northern Mariana Islands to areas as large as Australia and Africa Case studies range from relatively small projects such as rehabilitation of damage caused by wheel ruts in the high arctic to much larger projects such as attempts to rehabilitate thousands of hectares of Northern Territory wetlands in Australia Seedbank ecology economics remote sensing community involvement the role of the wetland consulting industry and other issues are discussed In an effort to synthesize information from around the world Joy Zedler presents a model that allows comparison of projects and may lead to better predictability of project outcomes In *An International Perspective on Wetland Rehabilitation* authors describe planting engineered structures prescribed flooding excavation and other rehabilitation methods from Israel to New Zealand to the Netherlands and elsewhere For the first time one volume offers an impression of the magnitude and diversity of the field of wetland rehabilitation around the globe

Lakes of the World with Google Earth Anja M. Scheffers, Dieter H. Kelletat, 2016-06-14 Featuring satellite imagery from Google Earth this guide provides a unique highly visual tour of lakes across the globe from the simple to the complex the nearby to the remote Clear text accompanies each image and identifies important aspects of each lake along with such information as its coordinates scale and altitudes if relevant From the many aspects of lake science including water budgets temperature regimes mixing types biology ecology and chemistry the book concentrates on the genesis of lakes and other closed forms containing water moisture swamps or minerals Its organisation follows different forms of lake origin often connected to the question of age such as extra terrestrial meteor impacts structural depressions by tectonic activity patterning of joints or faults volcanic origin or the forming influence of glacier ice subterranean permafrost littoral processes running water wind and solution of rocks karst forms Coverage also deals with temporal variations in lake existence within the context of climate change in the past and the future In addition special chapters are devoted to saline or salt lakes and in their evaporated forms to saltpans Providing essential information at a glance this guide will be help both specialists and general readers better understand the world s lakes as well as see them in a new perspective

Trophic Models of Aquatic Ecosystems Villy Christensen, Daniel Pauly, 1993

Ecological Dynamics of Tropical Inland Waters John Francis Talling, Jacques Lemoalle, 1998-12-03 A synthesis of tropical freshwater systems which illustrates the basic theory of freshwater biology

Limnology Jose Galizia Tundisi, Takako Matsumura Tundisi, 2012-01-27 Limnology provides an in depth and current overview of the field of limnology The result of a major tour de force by two renowned and experienced experts this unique and richly illustrated reference presents a wealth of data on limnology history water as a substrate lakes origins and aquatic biota Besides a general part it gives special focus to neotropical limnology prevalently applicable in countries in the Southern Hemisphere Starting with the essentials some definitions and a historical account this volume then details the main interaction mechanisms with physical and chemical factors diversity and geographical distribution With regard to the major continental aquatic systems it treats the dynamics variability and characterization of lakes reservoirs flooded areas saline lakes estuaries and coastal lagoons The

impact of human activity on water resources and the need for the rehabilitation of watersheds watershed ecosystems and estuaries are addressed subsequently To illustrate theory the final part includes research examples in limnology ecology and environmental sciences in different geographical contexts as well as ideas for new investigations This reference volume is intended for researchers and professionals working on inland waters lakes and rivers within the fields of biology ecology environment forestry geochemistry geophysics and water management It will also benefit students in the aforementioned areas and readers involved with limnology in related disciplines such as earth sciences environmental water and geological engineering

Green Development W. M. Adams,2003-09-02 This revised and updated new edition retains the clear and powerful argument which characterized the original It gives a valuable analysis of the theory and practice of sustainable development and suggests that at the start of the new millennium we should think radically about the challenge of sustainability Fully revised this latest edition includes further reading chapter outlines chapter summaries and new discussion topics and explores the roots of sustainable development thinking and its evolution in the last three decades of the twentieth century the dominant ideas within mainstream sustainable development the nature and diversity of alternative ideas about sustainability the problems of environmental degradation and the environmental impacts of development strategies for building sustainability in development from above and below Offering a synthesis of theoretical ideas on sustainability based on the industrialized economies of the North and the practical applied ideas in the South which tend to ignore First World theory this important text gives a clear discussion of theory and extensive practical insights drawn from Africa Latin America and Asia

Handbook of Ecological Restoration Martin R. Perrow,Anthony J. Davy,2002-09-05 The two volumes of this handbook provide a comprehensive account of the emerging and vibrant science of the ecological restoration of both habitats and species Ecological restoration aims to achieve complete structural and functional self maintaining biological integrity following disturbance In practice any theoretical model is modified by a number of economic social and ecological constraints Consequently material that might be considered as rehabilitation enhancement reconstruction or re creation is also included Restoration in Practice provides details of state of the art restoration practice in a range of biomes within terrestrial and aquatic marine coastal and freshwater ecosystems Policy and legislative issues on all continents are also outlined and discussed The accompanying volume Principles of Restoration defines the underlying principles of restoration ecology The Handbook of Ecological Restoration will be an invaluable resource to anyone concerned with the restoration rehabilitation enhancement or creation of habitats in aquatic or terrestrial systems throughout the world

Comparative Reservoir Limnology and Water Quality Management M. Straskraba, J.G. Tundisi, A. Duncan, 2013-03-09 The volume starts with comparative reservoir limnology and deals with problems relating to tropical semi arid and temperate reservoirs The second part concerns mathematical models of reservoirs including new techniques for investigating their limnology These cover physical chemical and biological phenomena remote sensing and the use of modelling to establish the most efficient strategy for water quality sampling In the third on reservoir water quality management the potential available in fish population management for biomanipulation of reservoir water quality is introduced Also included is a valuable section on a wide range of water quality measures coming from the well known Czech Hydrobiological Laboratory Finally the editors summarise the present state of reservoir limnology This book will be of interest to hydrobiologists and aquatic ecologists reservoir and sanitary engineers fisheries officers postgraduate teaching and the water industry dealing with drinking water supply and will provide insight into regulated rivers It draws information from all over the world and is relevant to the whole world

Women in ichthyology: an anthology in honour of ET, Ro and Genie E.K. Balon, Michael N. Bruton, David L.G. Noakes, 2012-12-06 This special volume is dedicated to the contributions of women ichthyologists Three colleagues were selected to represent all women ichthyologists Ethelwynn Trewavas ET Rosemary Lowe McConnell Ro and Eugenie Clark Genie All have had distinguished professional careers and have contributed in their own ways to their science The career of each is highlighted by a personal interview with one of the editors of the volume a bibliography of their lifetime publications and a biography of their careers Questions of historical inequities and current controversies in the treatment of women ichthyologists by their peers are raised and addressed by the women themselves The personal and professional influences of these three women and other women ichthyologists are highlighted A survey article by Pat Brown brings a number of women ichthyologists to the attention of a broader audience and points the way for a more comprehensive historical consideration of the accomplishments and contributions of women ichthyologists The volume continues with 16 solicited and contributed papers ET s studies of taxonomy and life history are echoed in papers on the taxonomy and systematics of marine angelfishes and of freshwater bitterlings a review of reproduction in the North Atlantic ichthyofauna and a comparison of reproductive styles and systematics of African minnows Ro s studies on ecology life history and behaviour are paralleled by papers on growth and metabolism in piranha the community structure in tide pool fishes and the social system and reproductive patterns in groupers Genie s pioneering work on sexual roles and sex change and her field studies of the behaviour of marine fishes are reflected in papers on gonadal structure and environmental sex determination in brook lamprey sexual patterns in hawfish reproduction and systematics in phallostethids gonadal structure and systematics in gobiids reproductive and predator avoidance behaviour in razorfish early ontogeny of an African mouth brooder and alternative life histories in killifish

Global Perspectives on River Conservation P. J. Boon, B. R. Davies, Geoffrey E. Petts, 2000-10-03 Throughout the world river conservation is becoming an increasingly important concern In arid regions for instance rivers often form the only

water resource for human sustenance indeed the World Bank has predicted that future wars will be about water In many parts of the developing world rivers are used as repositories for waste and river ecosystems consequently reflect the worst excesses of human exploitation In the industrialised nations the focus of attention is beginning to move from chemical clean up to restoring the structural damage to rivers caused by decades of river engineering Recognition is growing that river management needs a catchment wide perspective if the needs of human populations river habitats and wildlife are to reach a sustainable balance The development of river conservation strategies has become a global imperative Global Perspectives on River Conservation is the first book that provides a truly global synthesis of knowledge on river conservation with the aim of encouraging strategic river planning It does this in two ways First it sets out a worldwide region by region overview of the science policy and practice of river conservation Second it provides a topical review of different river settings such as tropical temperate temporary perennial large small and contemporary issues in river conservation such as classification and evaluation environmental legislation the role of public participation Global Perspectives on River Conservation is an invaluable reference for river managers planners and developers conservationists statutory water agencies government departments academics researchers postgraduates and final year under graduates working in the field of environmental management of inland waters

Ecological Modelling of River-Wetland Systems Maria Gabriela Alvarez Mieles, 2019-05-14

Around 6% of the Earth's land surface is covered by wetlands Wetlands play a key role in hydrological and biogeochemical cycles delivering multiple benefits to society sources of water supply flood regulation water purification agriculture fisheries and biodiversity Hence wetland systems are of immense socio economic as well as ecological importance In this research the focus was on the Abras de Mantecilla AdM wetland in the tropical coastal region of Ecuador a RAMSAR site and case study area for the EU FP7 WETwin project The research in this thesis involves a combination of field data collection multivariate analysis techniques as well as numerical modelling studies The goal was to explore the effects of changes in hydrological forcing on the hydrodynamic and ecohydraulic responses of the wetland The study aims to contribute to the understanding of how a tropical river wetland system functions in terms of hydrodynamics water quality primary production and biotic communities Spatial patterns of biotic communities and environmental variables are obtained as well as spatio temporal variability of hydrodynamics water quality primary productivity and fish habitat suitability conditions In data scarce areas and countries with financial constraints the combination of field measurements with numerical models was extremely useful and relevant confirming that these techniques complement each other in obtaining a better understanding of the dynamics of freshwater river wetland systems Studies like the present research can be used to enhance awareness about the environmental services of wetlands and stimulate cooperation between all stakeholders in order to achieve more sustainable wetland management
