The Orchid Cage Herbert W. Franke, 2024-06-01 This book is a new English translation of the classic science fiction story written in 1961 by Herbert W Franke widely held to be the most important German language science fiction writer A dead city on a distant planet two groups of people trying to explore it Step by step they penetrate the outer ring with its ultra modern technology the half ruined medieval city center and finally the mysterious center But is the eerie city really dead Suddenly the factories start working again the automatons intervene and somewhere in the background there is still something hidden that could perhaps awaken But is it people or machines Herbert W Franke leads the reader into an oppressively strange world only after the startling resolution does it become clear what lies behind the adventures of the intruders not a cosmic strangeness but a threatening development that could affect humans in the same way Franke s novel is thus a parable of the evolution of all humans in the age of technical communication [Einstiens von den Nazis](#)

View from Another Shore Franz Rottensteiner, 1999 A second edition with a completely new contextual introduction and other new material of a superb selection first published in 1973 and for long out of print of some of the best science fiction from continental Europe Included are stories by Stanislaw Lem Poland Vsevolod Ivanov Russia Eurocon award winner Adrian Rogoz Romania Herbert W Franke Germany Wolfgang Jeschke Germany Gerard Klein France and others [New Approaches to Monetary Theory](#) Heiner Ganßmann, 2012-03-12 Everybody uses money every day but we rarely stop to think about how money works In this book scholars from different disciplines seek to answer that question from historians to economists sociologists a philosopher and a physicist Money works as a social construction because we have mutual expectations that support its use despite the seeming irrationality of trading valuable things or doing strenuous work for pieces of paper or numbers in accounts Recently there has been a revival of interest in monetary

theory not least because the impacts of globalizing markets and of new communication and information technologies have changed the forms of money The deep crisis of the financial system has demonstrated the importance of a functioning monetary system and although renewed interest in this has led to significant contributions in various fields it remains true that no social science discipline on its own is sufficiently equipped to explain the basic workings of monetary systems their rapid innovation and their effects on social economic and political structures The contributors to this book report on their latest research on the origins of money on the nature of monetary transactions on money and the state and on the role of money and finance in the recent global crisis They show how established theories of money and the policies guided by these theories went wrong This collection will be a valuable resource for students and researchers seeking a deeper understanding of money

The Black Mirror and Other Stories Franz Rottensteiner,2008-12-31 Handsomely equipped with a comprehensive introductory historical essay editor s notes and selected bibliography this distinguished anthology is a model of genre research These previously untranslated stories published from 1871 onward offer reading virtually unknown to most American and many German readers Some authors combine scientific and philosophical issues like Kurd Lasswitz in his witty tale To the Absolute Zero of Existence A Story from 2371 while others as in Erik Simon s 1983 title story pose psychological puzzles involving alien phenomena Though the earlier stories in particular demand painstaking reading all of them repay it with rewarding insights into German and Austrian culture and the many possible uses and misuses of science

Relativistic Astrophysics and Cosmology - Einstein's Legacy Bernd Aschenbach,Vadim Burwitz,Günther Hasinger,Bruno Leibundgut,2007-10-20 Relativistic Astrophysics and Cosmology have developed into important and fruitful research areas with a hitherto unprecedeted public interest The year 2005 which marked the 100th anniversary of the annus mirabilis that year in which Albert Einstein published three of his most important scientific papers was the perfect opportunity to review and to present the current scientific understanding of relativistic topics including cosmological models cosmology related measurements the large scale properties of the Universe dark matter and dark energy the theory of gravity black holes theory and measurements active galactic nuclei clusters of galaxies jets Each of these subjects is addressed and the book represents a useful reference tool both for the expert and the new comer in these fields

The Empire Strikes Out William B. Fischer,1984 German science fiction offers a most interesting contribution to the history and criticism of science fiction William B Fischer examines two writers Kurd Lasswitz and Hans Dominik He concludes that German science fiction is in distinct contrast to the normative tradition of modern Anglo American science fiction and to many other literary traditions as well His book demonstrates vividly the social relevance and enduring cultural vitality of science fiction

Constructing Scientific Understanding Through Contextual Teaching Peter Heering,Daniel Osewold,2007-01-01 Learning by Doing is about the history of experimentation in science education The teaching of science through experiments and observation is essential to the natural sciences and its pedagogy These have been conducted as

both demonstration or as student exercises The experimental method is seen as giving the student vital competence skills and experiences both at the school and at the university level This volume addresses the historical development of experiments in science education which has been largely neglected so far The contributors of Learning by Doing pay attention to various aspects ranging from economic aspects of instrument making for science teaching to the political meanings of experimental science education from the 17th to the 20th century This collected volume opens the field for further debate by emphasizing the importance of experiments for both historians of science and science educators Pr sentation de l diteur **Who's who in Germany** Karl Strute,Theodor Doelken,1983 Vols for 1956 include a separately paged section Directory of organizations associations and institutions **Das Einstein-Papier** Lennart
