From The Heart A Biography Of Sir Brian Barratt Boyes:

From the Heart Donna Chisholm, 1987 The Developing Heart: A 'History' of Pediatric Cardiology Catherine A. Neill, E.P. Clark, 2013-04-18

Pediatric cardiology is celebrating in the 1990s the 50th anniversary of the beginnings of the age of therapy. This informal history describes how the discipline grew from the era of pathologic anatomy to the dawn of therapy, the beginnings of closed heart surgery between 1939 and 1945. That dawn ushered in a remarkable half century of change and growth leading from clinicophysiologic correlations through the start of open heart surgery in the 1950s. The text celebrates some of the achievements of this vivid and heroic age and describes how in the mid 1970s new surgical and medical approaches including prostaglandins and Doppler echocardiography led to successful cardiac treatment in infancy, the infant era. Interventional cardiology and the study of childhood arrhythmias began. Now in the 1990s a new era emphasising molecular biology and cardiac development is growing from the tools and concepts of the past. The four eras have focused on pathologic anatomy, clinicophysiologic correlations and surgery, heart problems in infancy and now the developing heart. In each era there have been advances in the four domains of pediatric cardiology: the heart before birth, the normal heart, heart disease and defects, and preventive cardiology. Growth in knowledge has been both episodic and dramatic, yet not a picture of unalloyed achievement. The later chapters discuss some of the problems beginning to be recognised in the new and current developmental era. The pioneers of pediatric cardiology, both men and women, are more than eponyms for each used in new and original ways, the tools and concepts available in their era. The interaction of tools and concepts is a theme in this book. Just as the tool of the stethoscope was vital in delineating the clinical profile of ventricular septal defect and patent ductus, the fluoroscope played a role in developing the concept of the Blalock-Taussig shunt. Pioneers also include patients and their families, and the book includes some discussion of what little is known of childhood and of the child with heart disease in the four different eras. This is a brief overview of the growth of knowledge of children's hearts from before William Harvey until our own time and includes references to histories of cardiac surgery and to collections of classic cardiac papers. By its emphasis on the child as the central historic figure and on the interaction of tools and concepts in the growth of knowledge, the text provides a celebratory approach to the 50th anniversary of modern pediatric cardiology.

Wrestling with the Angel Michael King, 2002-03-07

Janet Frame, born in 1924, is New Zealand's most celebrated and least public author. Her early life in small South Island towns seemed at times engulfed in a tide of doom: one brother still-born, another epileptic, two sisters dead of heart failure while swimming. Frame herself committed to mental hospitals for the best part of a decade. Later, her surviving sister was temporarily felled in adulthood by a stroke, an uncle cut his throat, and a cousin shot his lover, his lover's parents, and then himself. This then is an inspiring biography of a woman who climbed out of an abyss of unhappiness to take control of her life and become one of the great writers of her time. And to enable her biographer to write this book scrupulously and honestly, Janet Frame spoke for the first time about her whole life. She also

made available her personal papers and directed her family and friends to be equally communicative The result is a biography of astonishing intimacy and frankness written by multi award winning author Dr Michael King

Giving Comfort and Inflicting Pain Irena Madjar, 2016-09-17 This phenomenological study describes the lived experience of pain inflicted in the context of medically prescribed treatment and it explores the meanings of such pain for patients who endured it and for nurses whose actions contributed to its generation Thus it presents a thematic description of the phenomenon of clinically inflicted pain The dangers for both patients and nurses when clinically inflicted pain is ignored overlooked or treated with detachment are presented The study also points the way toward nursing practice that is guided by thoughtfulness and sensitivity to patients' lived experience and an awareness of the freedom and responsibility inherent in nursing actions including those involved in inflicting and relieving pain Questions are raised about nurses' knowledge attitudes and actions in relation to clinically inflicted pain The study highlights the need for nursing education and practice to consider the contribution of a phenomenological perspective to the understanding of the human experience of pain and the nursing role in its generation prevention and relief

Department of Statistics,2000 *Comprehensive Surgical Management of Congenital Heart Disease* Richard Jonas,2002-10-03 The management of congenital heart disease has changed dramatically over the last 15 years and continues to evolve at a rapid pace More than ever before contemporary practice requires a collaborative effort by a large healthcare team comprised not only of congenital cardiac surgeons but also pediatric cardiac nurses pediatric cardiologists perfu Reimagining a Child's Heart Thomas J. Kulik,Macdonald Dick,2025-07-14 There are more than 1 3 million adults living with surgically repaired or palliated cardiac defects not to mention thousands of children This book brings to life the many factors and personalities that led to the success of congenital cardiology during the last 70 years The term congenital cardiology refers to the treatment of congenital heart disease in children developed by surgeons and cardiologists and others It is safe to say that congenital cardiology is one of the major advances in the history of medicine The final step was achieved by surgery for children born with one ventricle rather than two The book features the author s extensive review and research including his original and lively narrative style It will be a valuable resource for physicians and surgeons that practice pediatric cardiology and pediatric cardiovascular surgery along with patients and families with these issues *Heart to Heart* Allen B. Weisse,2002 From 1979 to 2000 leading researchers and doctors in the field were interviewed to understand their motivations their problems their research and how their pioneering work changed the course of an epidemic in modern medicine Cardiac Valve Allografts 1962-1987 A.C. Yankah,R. Hetzer,C. Miller,D.N. Ross,J. Somerville,M.H. Yacoub,2012-12-06 It was the genius of Gordon Murray in Toronto that introduced the use of allografts into cardiac surgery in the 1950s Soon after this on opposite sides of the world Sir Brian Barratt Boyes in Auckland New Zealand and Mr Donald Ross in London undertook to use allografts for the replacement of diseased aortic valves Since that time the global interest in allografts has been patchy episodic and without a consensus Nonetheless for the last 20 years at least three groups in the world have steadfastly pursued the development of new and relevant information concerning the use of allograft valves in humans These are the centres of Sir Brian Barratt Boyes Mr Donald Ross and Mark O'Brien in Brisbane More recently talented investigators including Drs Yankah Yacoub and others have been developing information

concerning the immunological aspects of the use of allografts as well as their clinical use No doubt at present cardiac valve allografts of one sort or another are the devices of choice for conduits and have an important place in the surgery of aortic valve replacement Even so in the mind of this writer at least the future usefulness of allografts for the replacement of diseased cardiac valves and conduits between a ventricle and the pulmonary artery remains problematic and depends upon improvements in other devices for this purpose and upon improvements that may be made in preparing and using allografts
