Heinz Von Foerster 1911:

Heinz Von Foerster 1911-2002 Soren Brier,Ranulph Glanville,2004 Dedicated to the life and work of Heinz Von Foerster this is a double issue of the journal Cybernetics and Human Knowing **Austrian Information** ,2002 *The Origin of Individuals* Jean-Jacques Kupiec,2009 In the 17th century Descartes put forth the metaphor of the machine to explain the functioning of living beings In the 18th century La Mettrie extended the metaphor to man The clock was then used as the paradigm of the machine In the 20th century this metaphor still held but the clock was replaced by a computer Nowadays the organism is viewed as a robot obeying signals emanating from a computer program controlled by genetic information This book shows that such a conception leads to contradictions not only in the theory of biology but also in its experimental research program thereby impeding its development The analysis of this problem is based on the most recent experimental data obtained in molecular biology as well as the history and philosophy of biology It shows that the machine theory did not succeed in breaking with Aristotle s finalism The book presents a new approach to biological systems based on cellular Darwinism Genes are ruled by probabilistic mechanisms allowing cells to differentiate stochastically Embryo development is not governed by a determinist genetic program but by natural selection occurring among cell populations inside the organism This theory has considerable philosophical consequences Man may be a machine but he is a random one

System Theory in Geomorphology Kirsten von Elverfeldt,2012-03-12 Empirical research needs a profound theory to be successful This is the simple but in its consequences radical approach for this study in geomorphology It critically analyses the current system understanding and offers a new view for a geomorphology that understands systems as being open but at the same time operationally closed as self organized structure building and potentially self referential Kirsten von Elverfeldt succeeds in designing a theoretical framework that sets new standards within Physical Geography By using state of the art concepts in system theory it offers also new bridges to Human Geography as well as to other neighbouring disciplines This book was awarded the Dissertation prize 2010 of the German Working Group in Geomorphology of the DGfG and the Hans Bobek prize of the GG Austrian Geographical Society [The Nature of the Machine and the Collapse of Cybernetics](#) Alcibiades Malapi-Nelson,2017-07-03 This book is a philosophical exploration of the theoretical causes behind the collapse of classical cybernetics as well as the lesson that this episode can provide to current emergent technologies Alcibiades Malapi Nelson advances the idea that the cybernetic understanding of the nature of a machine entails ontological and epistemological consequences that created both material and theoretical conundrums However he proposes that given our current state of materials research scientific practices and research tools there might be a way for cybernetics to flourish this time The book starts with a historical and theoretical articulation of cybernetics in order to proceed with a philosophical explanation of its collapse emphasizing the work of Alan Turing Ross Ashby and John von Neumann Subsequently Malapi Nelson unveils the common metaphysical signature shared between cybernetics and emergent technologies identifying this

signature as transhumanist in nature Finally avenues of research that may allow these disruptive technologies to circumvent the cybernetic fate are indicated It is proposed that emerging technologies ultimately entail an affirmation of humanity
