Heathlands A National History Of Britains Lowland Heaths:

Heathland Clive Chatters, 2021-03-04 In Clive we have an ever fascinating guide to Britain's heathery districts not only marvelling at the wildlife of such wild places but also celebrating their diverse origins uses and cultural resonances Andrew Byfield Heathlands are so much more than simply purple carpets of heather They are ancient landscapes found throughout Britain that support a complex of inter related species and an immense diversity of habitats They also possess a unique human history defined by the struggle between pastoralism and the competing demands of those who seek exclusive use of the land In this latest addition to the British Wildlife Collection Clive Chatters introduces us to Britain's heathlands and their anatomy He then takes the reader on a geographical heathland tour from the maritime sub arctic of the Shetlands to the mild wetness of the Atlantic coast with an in memoriam nod to those heaths that have been erased from common memory and understanding He concludes with a review of how people have perceived and used heathland wildlife over the ages and sets out a future vision for this iconic landscape its unique habitats and the species that live there Most of our heaths are pale shadows of their former selves However Chatters argues it is not inevitable that the catastrophic losses of the recent past are the destiny of our remaining heaths Should we wish their place in the countryside as an integral part of British culture can be secured

Proceedings - Dorset Natural History and Archaeological Society Dorset Natural History and Archaeological Society,1995 List of members in each volume Hymenoptera and Conservation T. R. New,2012-07-02 Hymenoptera the bees wasps and ant are one of the largest insect orders and have massive ecological importance as pollinators and as predators or parasitoids of other insects These roles have brought them forcefully to human notice as governors of some key ecological services that strongly influence human food supply Recent declines of pollinators and introductions of alien pests or biological control agents are only part of the current concerns for conservation of Hymenoptera and of the interactions in which they participate in almost all terrestrial ecosystems Both pests and beneficial species abound within the order sometimes closely related within the same families Many taxa are both difficult to identify and very poorly known This global overview the first such account for the whole of the Hymenoptera discusses a broad range of themes to introduce the insects and their conservation roles and needs and how their wellbeing may be approached The book is intended as a source of information for research workers students conservation managers and naturalists as an introduction to the importance of this dominant

insect order *Landscape in the Longue Durée* Christopher Tilley, 2017-10-06 Pebbles are usually found only on the beach in the liminal space between land and sea But what happens when pebbles extend inland and create a ridge brushing against the sky *Landscape in the Longue Durée* is a 4 000 year history of pebbles It is based on the results of a four year archaeological research project of the east Devon Pebblebed heathlands a fascinating and geologically unique landscape in the UK whose bedrock is composed entirely of water rounded pebbles Christopher Tilley uses this landscape to argue that pebbles are like no other kind of stone they occupy an especial place both in the prehistoric past and in our contemporary culture It is for this reason that we must re think continuity and change in a radically new way by considering embodied relations between people and things over the long term Dividing the book into two parts Tilley first explores the prehistoric landscape from the Mesolithic to the end of the Iron Age and follows with an analysis of the same landscape from the eighteenth into the twenty first century The major findings of the four year study are revealed through this chronological journey from archaeological discoveries such as the excavation of three early Bronze Age cairns to the documentation of all 829 surviving pebble structures and beyond to the impact of the landscape on local economies and its importance today as a military training camp The results of the study will inform many disciplines including archaeology cultural and art history anthropology conservation and landscape studies **A Natural History of Britain and Ireland** Eric Simms, 1979
