This innovative text offers an introduction to money banking and financial markets with a special emphasis on the importance of confidence and trust in the macroeconomic system. It also presents the theory of endogenous money creation in contrast to the standard money multiplier and fractional reserve explanation found in other textbooks. The U.S. economy and financial institutions are used to explain the theoretical and practical framework with international examples weaved in throughout the text. It covers key topics including monetary policy, fiscal policy, accounting principles, credit creation, central banks, and government treasuries. Additionally, the book considers the international economy including exchange rates, the Eurozone, Chinese monetary policy, and reserve currencies. Taking a broad look at the financial system, it also looks at banking regulation, cryptocurrencies, real estate, and the oil and gold commodity markets. Students are supported with chapter objectives, key terms, and problems. A test bank is available for instructors. Further instructional resources including a Teaching Guide and PowerPoint slides can be accessed at <https://moneybankingmarkets.com/teaching-guides>.
