Reforming agricultural markets in Africa Kherallah, Mylene, Delgado, Christopher L., Gabre-Madhin, Eleni Z., Minot, Nicholas, Johnson, Michael, 2002-01-01 The long term reduction of hunger and poverty in Sub Saharan Africa remains one of the great challenges for the international development community Eliminating hunger and promoting widespread growth in the region inevitably involves agriculture given its central role in the region s economies Over the past 20 years most African governments have carried out reforms to deregulate agricultural markets and reduce the role of state enterprises How much has the state actually withdrawn from agricultural markets Have well functioning private markets emerged How successful were these reforms in boosting agricultural production economic growth and the incomes of the rural poor What lessons can we learn from the reform process The authors of this book address these questions through an analysis based on an extensive review of experiences with reform focusing on three major agricultural markets fertilizer food crops and export crops They examine the historical rationales for intervention the factors contributing to reform the process of implementation and the impact of the reforms on farmers and consumers in Sub Saharan Africa The authors find that reforms have had many favorable results but that the impact has been muted by partial implementation and structural constraints They propose a new agenda for promoting the development of agricultural markets in Sub Saharan Africa identifying areas where governments can play a supportive role They argue that appropriate agricultural marketing policies and investments can improve livelihoods and the economic health of the region An Economic Assessment of Banana Genetic Improvement and <u>Innovation in the Lake Victoria Region of Uganda and Tanzania</u> Melinda Smale, W. Tushemereirwe, 2007 This report assesses the impact on smallholder farmers of technology options developed by Uganda's National Agricultural Research Organization NARO to improve the productivity of the East African highland banana a major crop in Uganda and Tanzania The contributors survey an array of options either currently practiced or under development including improved soil fertility management practices conventional banana improvement and transgenic banana cultivars Their survey produces a number of findings with important implications for banana production a recently developed banana hybrid adopted in Tanzania reduced the vulnerability of Tanzanian households to yield losses from pests and disease a strong network of social ties

among farmers facilitates the spread of best soil fertility management practices through farmer to farmer exchange and transgenic bananas currently being developed could have pro poor impact Drawing on simulations of the economic benefits of these and other technology options the contributors conclude that the current strategy endorsed by NARO of combining conventional and transgenic approaches to mitigate the biotic pressures that cause major economic losses is essential for sustaining banana production systems The report serves as a valuable baseline for researchers and others interested in measuring the effectiveness of crop improvement programs

The main new conceptual tool used is the application of the theory of imperfect information and the effects this has on the behaviour of economic

agents This helps to explain why perfect competition models rarely have success when dealing with developing economies. The authors also stress the necessity of balance in dealing with many of the classic problems in development studies the importance of both the individual as economic agent and cultural norms as the framework of social behaviour the dual relationship between equity and efficiency in economic policy making the importance of market rivalry and the potential of market breakdown Designed specifically for graduate students this book analyses the key microeconomic problems facing the very poorest sectors of developing economies. It utilises simple theoretical models and is presented in a compact and analytical form High technical sophistication is avoided and the only pre requisite is some familiarity with the tools of general microecomic theory at a first year graduate or advanced undergraduate level
