Economic Growth And Development (Third Edition) Hendrik Van Den Berg, 2016-09-02

This textbook covers the full range of topics and issues normally included in a course on economic growth and development. Both mainstream economic perspectives as well as the multi-paradigmatic, inter-disciplinary and dynamic evolutionary perspectives from heterodox economics are detailed. Economic development is viewed in terms of the long-run well-being of humanity, social stability, environmental sustainability and just distribution of economic gains, not simply as the growth of GDP. Furthermore, this textbook explicitly recognizes the complexity of economic development by linking economic activity to our broader social and natural environments. The textbook's unique feature is its focus on the natural environment. Both the historical effects of economic development on the environment and the environmental constraints on future economic development are thoroughly discussed in two chapters on environmental issues and policies. In fact, because economic development is defined in terms of economic, social and environmental sustainability, the natural environment is included in discussions throughout the book. The textbook is interdisciplinary; knowledge from fields such as sociology, psychology, political science, economic history and ecology is called on to enhance the economic analysis. A thorough historical account of the development of the principal paradigms of economic development is also included, and the important issues of institutional development and cultural change merit their own

chapters Two chapters on technological change holistically focus on production technologies as well as the dynamic performance of entire economic social and ecological systems Also the important relationship between economic development and globalization is presented in three chapters on international trade international finance and investment and immigration from both orthodox and heterodox perspectives
