Effect Of Weldments On The Fatigue Stren:

Effect of Weldments on the Fatigue Strength of Steel Beams John W. Fisher, 1970 A project was undertaken to develop mathematical design relationships that would define in general terms the fatigue strength of rolled and welded beams rolled and welded beams with cover plates and welded beams with flange splices under cyclic loading In all 374 steel beams were made and tested of which 204 had cover plates with two weld details The design variables were grouped in three major categories type of detail stress condition and type of steel Particular emphasis was laid on detail type minimum maximum and range were the stress conditions Steels A36 A441 and A514 were used The Effect of Weldments on the Fatigue
