Farm households in Egypt: A typology for assessing vulnerability to climate change Nin-Pratt, Alejandro, ElDidi, Hagar, Breisinger, Clemens, 2018-09-06 Using governorate level national data and household survey data we build a typology of farm households in Egypt that allows us to describe how different farm households behave in response to policy and environmental changes affecting their resources welfare and opportunities in output and input markets One of the major contributions of this study is the building of a unique dataset that combines various data sources at different levels of aggregation providing the information needed to model the farm typology We used this dataset as the input of a multi step procedure that includes the use of principal components and cluster analyses to identify 14 household types To illustrate possible uses of the typology we look at the vulnerability of the different types of households to projected changes in temperature water availability and water demand from crops due to climate change and discuss which farmers production systems and regions will be most affected by climate shocks We assumed that increased temperatures by 2050 would result in increased water demand and reduced yields for most crops due to heat stress and harsher growing conditions We define three climate change scenarios that differ in the expected water flows of the Nile into the Aswan High Dam Results of simulations using a household model suggest that Egypt is likely to experience a significant reduction in output agricultural labor demand and cultivated area because of climate change although the severity of this outcome will depend on the magnitude of changes in the Nile s flow Most affected by these changes will be small and average households producing field crops Our results suggest that to mitigate the risks and possible future impacts of climate change the country will need to Move away from policies supporting production of cereals and water inefficient crops towards diversification of production into water efficient high value crops facilitate the access of skilled resource poor producers to capital and markets and create opportunities for off farm employment and income for smallholders that are using resources inefficiently

G. Manning,2003-05-29 This history of land tenure under the Ptolemies explores the relationship between the new Ptolemaic state and the ancient traditions of landholding and tenure Departing from the traditional emphasis on the Fayyum it offers a coherent framework for understanding the structure of the Ptolemaic state and thus of the economy as a whole Drawing on both Greek and demotic papyri as well as hieroglyphic inscriptions and theories taken from the social sciences Professor Manning argues that the traditional central state despotic model of the Egyptian economy is insufficient The result is a subtler picture of the complex relationship between the demands of the new state and the ancient locally organized social structure of Egypt By revealing the dynamics between central and local power in Egypt the book shows that Ptolemaic economic power ultimately shaped Roman Egyptian social and economic institutions **A Manual of Egyptian Farm Crops and Vegetables** G. today's agricultural challenges The work particularly emphasizes innovative water management systems crop rotation methods and resource efficient planting techniques that have stood the test of time The book progresses systematically through each civilization's unique contributions from the Romans advanced aqueduct and terrace farming systems to the Egyptians masterful Nile flood management techniques and the Mayans ingenious forest garden systems What makes this work particularly valuable is its practical approach to bridging ancient wisdom with modern application supported by contemporary case studies and scientific analysis of archaeological findings Readers discover how these time tested methods can be adapted using current technology while reducing environmental impact and resource consumption The content moves seamlessly from historical context to technical analysis concluding with actionable frameworks for implementation By establishing clear connections between historical practices and modern disciplines like hydraulic engineering and soil science the book demonstrates how ancient solutions can be scaled and adapted for both small scale organic farming and larger agricultural operations This unique blend of historical insight and practical application makes it an invaluable resource for agricultural professionals sustainable farming advocates and scholars interested in historical technology
