Bureau of Training,1975 **Sourcebook of Family Theories and Methods** Pauline Boss,William J. Doherty,Ralph LaRossa,Walter R. Schumm,Suzanne K. Steinmetz,2008-11-19 Origins We call this book on theoretical orientations and methodological strategies in family studies a sourcebook because it details the social and personal roots i e sources from which these orientations and strategies flow Thus an appropriate way to preface this book is to talk first of its roots its beginnings In the mid 1980s there emerged in some quarters the sense that it was time for family studies to take stock of itself A goal was thus set to write a book that like Janus would face both backward and forward a book that would give readers both a perspective on the past and a map for the future There were precedents for such a project The Handbook of Marriage and the Family edited by Harold Christensen and published in 1964 the two Contemporary Theories about the Family volumes edited by Wesley Burr Reuben Hill F Ivan Nye and Ira Reiss published in 1979 and the Handbook of Marriage and the Family edited by Marvin Sussman and Suzanne Steinmetz then in production Handbook on Evolution and Society Alexandra Maryanski,Richard Machalek,Jonathan H. Turner,2015-11-17 Handbook on Evolution and Society brings together original chapters by prominent scholars who have been instrumental in the revival of evolutionary theorizing and research in the social sciences over the last twenty five years Previously unpublished essays provide up to date critical surveys of recent research and key debates The contributors discuss early challenges posed by sociobiology the rise of evolutionary psychology the more conflicted response of evolutionary sociology to sociobiology and evolutionary psychology Chapters address the application and limitations of Darwinian ideas in the social sciences Prominent authors come from a variety of disciplines in ecology biology primatology psychology sociology and the humanities The most comprehensive resource available this vital collection demonstrates to scholars and students the new ways in which evolutionary approaches ultimately derived from biology are influencing the diverse social sciences and humanities The Ecosystem Concept In

Anthropology Emilio F Moran, Susan H Lees, 2019-09-06 Critics of the ecosystem concept have noted the tendency of ecosystem based studies to overemphasize energy flow to rely on functionalist assumptions to neglect historical and evolutionary factors and to overlook the role of individuals as the locus of natural selection and decision making In this volume leading figures in the study of biological and human ecology evaluate these criticisms and propose ways to advance the state of knowledge in ecological research

Society and Its Environment Egbert Tellegen, Maarten Wolsink, 2014-01-02 First Published in 1998 People cannot live without changing nature They do so by breathing feeding and defecating by dressing and heating and by creating barriers against wind and water cold and heat These forms of human induced change of nature have been present since the dawn of mankind People are constantly confronted by a malignant nature against which they have to defend themselves and whose resources they have to use in order to survive However the relationship between man and nature has dramatically changed during the past centuries More than the word nature the term environment has become strongly associated with damage and decay caused by human beings Hence in practice environment is mostly associated with problems In this book the term environment does not describe different environments and the way they are changed by human activities in general but focuses on those human induced of it What are the causes of these changes when and where are these changes considered as environmental problems and how do people react to these changes are the main questions of this book One of the possible reactions to environmental problems is the efforts to solve them The ways in which individual citizens private enterprises public authorities environmental organizations and others try to solve environmental problems is a main topic of this book

Functions: selection and mechanisms Philippe Huneman, 2013-02-20 This volume handles in various perspectives the concept of function and the nature of functional explanations topics much discussed since two major and conflicting accounts have been raised by Larry Wright and Robert Cummins papers in the 1970s Here both Wright's etiological theory of functions and Cummins systemic conception of functions are refined and elaborated in the light of current scientific practice with papers showing how the etiological theory faces several objections and may in reply be revisited while its counterpart became ever more sophisticated as researchers discovered fresh applications for it Relying on a firm knowledge of the original positions and debates this volume presents cutting edge research evincing the complexities that today pertain in function theory in various sciences Alongside original papers from authors central to the controversy work by emerging researchers taking novel perspectives will add to the potential avenues to be followed in the future Not only does the book adopt no a priori assumptions about the scope of functional explanations it also incorporates material from several very different scientific domains e.g. neurosciences ecology or technology In general functions are implemented in mechanisms and functional explanations in biology have often an essential relation with natural selection These two basic claims set the stage for this book's coverage of investigations concerning both functional explanations and the metaphysics of functions It casts new light on these claims by testing them through their confrontation with scientific developments in

biology psychology and recent developments concerning the metaphysics of realization Rather than debating a single theory of functions this book presents the richness of philosophical issues raised by functional discourse throughout the various sciences International Encyclopedia of Human Geography ,2019-11-29 International Encyclopedia of Human Geography Second Edition Fourteen Volume Set embraces diversity by design and captures the ways in which humans share places and view differences based on gender race nationality location and other factors in other words the things that make people and places different Questions of for example politics economics race relations and migration are introduced and discussed through a geographical lens This updated edition will assist readers in their research by providing factual information historical perspectives theoretical approaches reviews of literature and provocative topical discussions that will stimulate creative thinking Presents the most up to date and comprehensive coverage on the topic of human geography Contains extensive scope and depth of coverage Emphasizes how geographers interact with understand and contribute to problem solving in the contemporary world Places an emphasis on how geography is relevant in a social and interdisciplinary context
