Contemporary Issues in Economics and Econometrics Stan Hurn,Ralf Becker,2004-01-01 All of the papers share a high level of practical relevance and usefulness that is sometimes missing in economic research Indeed the reader will find that very issue taken up as the theme of Paul Klemperer s delightful essay and all five papers under the heading of econometric theory will be extremely useful for most applied researchers I hope that the reader will also share my feeling of gratitude toward Ralf Becker and Stan Hurn for putting together this outstanding permanent record of some of the conference s most important contributions From the foreword by James D Hamilton University of California San Diego US This authoritative collection of papers covers a broad spectrum of topics in theoretical and applied economics and econometrics The tone of the book is set by Paul Klemperer s contribution on using and abusing economic theory in which academics are encouraged to widen the scope of their analyses beyond the confines of elegant models which sometimes lack real world detail As a result many of the chapters in this volume share a high degree of practical relevance **The Political Power of Economic Ideas** Peter A. Hall,2020-11-10 John Maynard Keynes once observed that the ideas of economists and political philosophers both when they are right and when they are wrong are more powerful than is commonly understood The contributors to this volume take that assertion seriously In a full scale study of the impact of Keynesian doctrines across nations their essays trace the reception accorded Keynesian ideas initially during the 1930s and then in the years after World War II in a wide range of nations including Britain the United States France Germany Italy Japan and Scandinavia The

contributors review the latest historical evidence to explain why some nations embraced Keynesian policies while others did not. At a time of growing interest in comparative public policy making they examine the central issue of how and why particular ideas acquire influence over policy and politics. Based on three years of collaborative research for the Social Science Research Council the volume takes up central themes in contemporary economics political science and history. The contributors are Christopher S Allen Marcello de Cecco Peter Alexis Gourevitch Eleanor M Hadley Peter A Hall Albert O Hirschman Harold James Bradford A Lee Jukka Pekkarinen Pierre Rosanvallon Walter S Salant Margaret Weir and Donald Winch.

An International Perspective on Economic Education William B. Walstad, 1994-01-31 Economics is taught in some form in the secondary schools of nations throughout the world. The subject is rarely taught in elementary schools and while economics courses are offered in universities the majority of students end their formal education with secondary school. Thus the best opportunity for the economic education of the youth of a nation occurs in secondary schools. This book examines economic education at this critical level of the educational system. The teaching of economics in secondary schools varies across countries. These differences occur because of history the structure of education and other national factors. At the same time there are common elements in the economic education of many countries especially in content coverage. This contrast between the common features and the uniqueness of economic education in secondary schools of major industrial nations exemplifies the international perspective presented in this book. The international perspective is developed in the six sections of the volume. The first section discusses why nations should include economics in school curricula and presents a framework for teaching economics that should have global appeal. Dissension and consensus on economic issues among North American and European economists are examined in the second section. The third section surveys the U S research literature on precollege economic education and assesses the current state of economics instruction in U S schools. The economics curricula and educational practices in seven other nations the U K Canada Japan Germany Austria Korea and Australia are described in the fourth and fifth sections. The fifth section also presents international comparisons of economic understanding based on national testing in six of those nations. The sixth and final section explores the role of economic education in centrally planned economies and its effects on the transition to a market economy using Russia Bulgaria and China as case studies.
