Predictocracy Michael Abramowicz,2008-10-01 Predicting the future is serious business for virtually all public and private institutions for they must often make important decisions based upon such predictions This text explores how institutions might improve their predictions and arrive at better decisions by means of prediction markets Modeling Online Auctions Wolfgang Jank,Galit Shmueli,2010-12-01 Explore cutting edge statistical methodologies for collecting analyzing and modeling online auction data Online auctions are an increasingly important marketplace as the new mechanisms and formats underlying these auctions have enabled the capturing and recording of large amounts of bidding data that are used to make important business decisions As a result new statistical ideas and innovation are needed to understand bidders sellers and prices Combining methodologies from the fields of statistics data mining information systems and economics Modeling Online Auctions introduces a new approach to identifying obstacles and asking new questions using online auction data The authors draw upon their extensive experience to introduce the latest methods for extracting new knowledge from online auction data Rather than approach the topic from the traditional game theoretic perspective the book

treats the online auction mechanism as a data generator outlining methods to collect explore model and forecast data Topics covered include Data collection methods for online auctions and related issues that arise in drawing data samples from a Web site Models for bidder and bid arrivals treating the different approaches for exploring bidder seller networks Data exploration such as integration of time series and cross sectional information curve clustering semi continuous data structures and data hierarchies The use of functional regression as well as functional differential equation models spatial models and stochastic models for capturing relationships in auction data Specialized methods and models for forecasting auction prices and their applications in automated bidding decision rule systems Throughout the book R and MATLAB software are used for illustrating the discussed techniques In addition a related Web site features many of the book s datasets and R and MATLAB code that allow readers to replicate the analyses and learn new methods to apply to their own research Modeling Online Auctions is a valuable book for graduate level courses on data mining and applied regression analysis It is also a one of a kind reference for researchers in the fields of statistics information systems business and marketing who work with electronic data and are looking for new approaches for understanding online auctions and processes Visit this book s companion website by clicking here [The Oxford Handbook of Supply Chain Management](#) Thomas Y. Choi,Julie Juan Li,Dale S. Rogers,Tobias Schoenherr,Stephan M. Wagner,2021-09-13 Supply chain management contends with structures and processes for delivering goods and services to customers It addresses the core functions of connected businesses to meet downstream demand This innovative volume provides an authoritative and timely guide to the overarching issues that are ubiquitous throughout the supply chain In particular it addresses emerging issues that are applicable across supply chains such as data science financial flows human capital internet technologies risk management cyber security and supply networks With chapters from an international roster of leading scholars in the field the Oxford Handbook of Supply Chain Management is a necessary resource for all students and researchers of the field as well as for forward thinking practitioners **American Book Publishing Record** ,2006 **Contracting and Contract Law in the Age of Artificial Intelligence** Martin Ebers,Cristina Poncibò,Mimi Zou,2022-06-30 This book provides original diverse and timely insights into the nature scope and implications of Artificial Intelligence AI especially machine learning and natural language processing in relation to contracting practices and contract law The chapters feature unique critical and in depth analysis of a range of topical issues including how the use of AI in contracting affects key principles of contract law from formation to remedies the implications for autonomy consent and information asymmetries in contracting and how AI is shaping contracting practices and the laws relating to specific types of contracts and sectors The contributors represent an interdisciplinary team of lawyers computer scientists economists political scientists and linguists from academia legal practice policy and the technology sector The chapters not only engage with salient theories from different disciplines but also examine current and potential real world applications and implications of AI in contracting and explore feasible legal

policy and technological responses to address the challenges presented by AI in this field The book covers major common and civil law jurisdictions including the EU Italy Germany UK US and China It should be read by anyone interested in the complex and fast evolving relationship between AI contract law and related areas of law such as business commercial consumer competition and data protection laws **Simulating Social Complexity** Bruce Edmonds,Ruth Meyer,2017-11-24 This

volume examines all aspects of using agent or individual based simulation This approach represents systems as individual elements having their own set of differing states and internal processes The interactions between elements in the simulation represent interactions in the target systems What makes this social is that it can represent an observed society Social systems include all those systems where the components have individual agency but also interact with each other This includes human societies and groups but also increasingly socio technical systems where the internet based devices form the substrate for interaction These systems are central to our lives but are among the most complex known This poses particular problems for those who wish to understand them The complexity often makes analytic approaches infeasible but on the other hand natural language approaches are also inadequate for relating intricate cause and effect This is why individual and agent based computational approaches hold out the possibility of new and deeper understanding of such systems This handbook marks the maturation of this new field It brings together summaries of the best thinking and practices in this area from leading researchers in the field and constitutes a reference point for standards against which future methodological advances can be judged This second edition adds new chapters on different modelling purposes and applying software engineering methods to simulation development Revised existing content will keep the book up to date with recent developments This volume will help those new to the field avoid reinventing the wheel each time and give them a solid and wide grounding in the essential issues It will also help those already in the field by providing accessible overviews of current thought The material is divided into four sections Introduction Methodology Mechanisms and Applications Each chapter starts with a very brief section called Why read this chapter followed by an abstract which summarizes the content of the chapter Each chapter also ends with a section on Further Reading Whilst sometimes covering technical aspects this second edition of Simulating Social Complexity is designed to be accessible to a wide range of researchers including both those from the social sciences as well as those with a more formal background It will be of use as a standard reference text in the field and also be suitable for graduate level courses Economic Information, Decision, and Prediction M.
