Economic Organization and Economic Knowledge, 1999 **Routledge Handbook of the Economics of Knowledge** Cristiano Antonelli, Albert Link, 2014-12-05 The Routledge Handbook of the Economics of Knowledge provides a comprehensive framework to integrate the advancements over the last 20 years in the analysis of technological knowledge as an economic good and in the static and dynamic characteristics of its generation process There is a growing consensus in the field of economics that knowledge technological knowledge in particular is one of the most relevant resources of wealth yet it is one of the most difficult and complex activities to understand or even to conceptualize The economics of knowledge is an emerging field that explores the generation exploitation and dissemination of technological knowledge Technological knowledge cannot any longer be regarded as a homogenous good that stems from standardized generation processes Quite the opposite technological knowledge appears more and more to be a basket of heterogeneous items resources and even experiences All of these sources which are both internal and external to the firm are complementary as is the interplay between a bottom up and top

down generation processes In this context the interactions between the public research system private research laboratories and various networks of learning processes within and among firms play a major role in the creation of technological knowledge In this Handbook special attention is given to the relationship among technological knowledge and both upstream scientific knowledge and related downstream resources By addressing the antecedents and consequences of technological knowledge from both an upstream and downstream perspective this Handbook will become an indispensable tool for scholars and practitioners aiming to master the generation and the use of technological knowledge

Economic Knowledge in Regulation Lorna S Schrefler, 2014-12-01 It is conventional to argue that the autonomy and reputation of independent regulatory agencies IRAs depend on their expertise Yet studies on how IRAs create and deploy their knowledge capacity are few and far apart By addressing the underexplored question of the role of economics in regulatory policy making this book fills a gap in two different strands of literature on IRAs and on knowledge utilisation respectively Only a few authors have taken a somewhat comparable approach eg McGarity 1991 Morgenstern 1997 Jennings and Hall 2011 but their work focuses on US regulators Conversely little has been written on their European counterparts This book also proposes an innovative solution to operationalise hypotheses on the role of expertise in policy making and makes this contribution particularly relevant for recent debates on evidence based policy making Finally it takes a close look at specific regulatory decisions by one of the oldest and most authoritative regulators

The State and Economic Knowledge

Mary O. Furner, Barry Supple, 1990-08-31 This book addresses an important but inadequately recognized dimension of the activities of the modern state the role it plays in producing the theoretical and practical knowledge necessary for economic policy making Over time governments in modern societies have assumed the ultimate

responsibility for ensuring the economic well being of their citizens and for protecting their competitive positions in the international economy To perform their various coordinating functions effectively and to maintain legitimacy governments have found it necessary to rely on accurate information regarding economic conditions and trends and on empirically based theories or models that allow officials to anticipate the economy's performance under specified conditions The traditional assumption which this collection of essays challenges is that despite this profound dependence governments have generally acted as passive consumers of whatever ideas economists in the private sector and professions had to offer This book brings together papers that reveal the ways in which modern states have helped to generate new economic knowledge and how that process interacts with economic changes specific political institutions and ideological contexts
