other cooperations The location of economic activities is explored There are two major sets of influences on the innovativeness and competitiveness of places 1 technical skills and information are key in the process of technological change and competition and 2 urban areas contain a complex synergy of factors that smaller more remote places cannot attain Producer services which are strongly based on knowledge and symbolic analysis are therefore typically clustered in cities Small firms and entrepreneurship are examined as a crucial part of a well functioning regional economy Research has demonstrated the close relationship between entrepreneurship and regional and local development Innovativeness developed within local inter firm networks both supports existing firms and presents opportunities for starting new businesses in order to serve newly identified markets Networks of firms complement and sometimes substitute for a firm s own technological capability Networks of large firms and the globalization of economic activity are then considered Policy attempts at national regional and local scales to influence the location of economic activity are analyzed The economic progress and prospects of developing countries are assessed Policies for innovation entrepreneurship and the functioning of the economy are essential and require flexibility in order to respond to changing conditions in the world economy in specific product markets and in technology Concludes with a discussion of some of the central themes that were facing society at the end of the 1990s including basic needs for human development environmental issues employment and human capital and infrastructures for future technologies AT
