Apocalypse Not Ben W. Bolch, Harold Lyons, 1993 What is likely to kill off the human race first Overpopulation Global warming Ozone depletion Chemicals and insecticides Would you believe none of these Drawing on scientific evidence Ben Bolch and Harold Lyons an economist and a chemist show that the prophets of apocalyptic doom mislead and scare the public with their warnings of impending catastrophes Apocalypse Not debunks the alleged global threats to mankind as well as the scares about asbestos and radon It fosters respect for calm objective science while showing that the doomsday lobbyists exploit ignorance and cause hysteria Bolch and Lyons go on to show that contrary to the beliefs of some environmentalists modern society and the growth in population do not threaten our quality of life In fact science and industry have enabled more people to live longer healthier lives than ever before Resources are cheaper and more plentiful than anytime in history In light of those facts the authors take up the perplexing question of why the environmental movement with its apparent death wish has been able to persuade so many people that the human race is doomed Their answer to that question could help turn the tide that threatens to undo the industrial and scientific revolutions This book is the book that will restore good sense to thinking about the environment

The Political Economy of Development and Underdevelopment in Africa Toyin Falola, Jessica Achberger, 2013-06-07 While Africa is too often regarded as lying on the periphery of the global political arena this is not the case African nations have played an important historical role in world affairs It is with this understanding that the authors in this volume set out upon researching and writing their chapters making an important collective contribution to our understanding of modern Africa Taken as a whole the chapters represent the range of research in African development and fully tie this development to the global political economy African nations play significant roles in world politics both as nations influenced by the ebbs and flows of the global economy and by the international political system but also as actors directly influencing politics and economics It is only through an understanding of both the history and present place of Africa in global affairs that we can begin to assess the way forward for future development
