Ecosystems And Human Activity:

Ecosystems and Human Activity ,1994 **Ecosystems and Human Activity** Judith Woodfield,2000 **The Human Impact on the Natural Environment** Andrew Goudie,2000 The book also discusses the development of ideas on global change BOOK JACKET *Ecosystems of Disturbed Ground* L.R. Walker,1999-12-17 As the human population inexorably grows its cumulative impact on the Earth s resources is hard to ignore The ability of the Earth to support more humans is dependent on the ability of humans to manage natural resources wisely Because disturbance alters resource levels effective management requires understanding of the ecology of disturbance This book is the first to take a global approach to the description of both natural and anthropogenic disturbance regimes that physically impact the ground Natural disturbances such as erosion volcanoes wind herbivory flooding and drought plus anthropogenic disturbances such as forestry grazing mining urbanization and military actions are considered Both disturbance impacts and the biotic recovery are addressed as well as the interactions of different types of disturbance Other chapters cover processes that are important to the understanding of disturbance of all types including soil processes nutrient cycles primary productivity succession animal behaviour and competition Humans react to disturbances by avoiding exacerbating or restoring them or by passing environmental legislation All of these issues are covered in this book Managers need better predictive models and robust data collections that help determine both site specific and generalized responses to disturbance Multiple disturbances have a complex effect on both physical and biotic processes as they interact This book provides a wealth of detail about the process of disturbance and recovery as well as a synthesis of the current state of knowledge about disturbance theory with extensive documentation 200 Science Investigations for Young Students Martin Wenham,2000-12-13 This book enables teachers to develop a complete range of basic investigations for science with students aged five to 11 years It demonstrates how children can use hands on activities to consolidate and extend their knowledge and understanding Investigations are presented in a generic form so that teachers can work through them and adapt them to meet the particular needs of their own classes The presentation of activities ranges from highly structured sequences of instructions and questions with answers to more general discussions depending on the approach needed and the likely variations in equipment and materials available Each activity is aimed to help any teacher carry out significant scientific investigations with their class and where necessary to learn alongside them Almost every investigation and activity has been tested by the author Investigations use readily available non specialist or recycled materials The context of this book is children s need to learn through first hand experience of the world around them This book is an essential resource for teachers planning an effective science programme or for student teachers needing to broaden their scientific knowledge and understanding 200 Science Investigations for Young Students is the companion volume of activities which demonstrate the theories in Martin Wenham s Understanding Primary Science The content has been guided by but not limited to The National Curriculum 2000 and the

Initial Teacher Training Curriculum for Primary Science issued by the Teacher Training Agency **Managing Urban River Ecosystems for Achieving Regional Sustainability in the Pearl River Delta Region** Hui Liu, 2024-12-13 This book provides a systematic understanding of urban river management from the perspective of ecosystem health in the Pearl River Delta region of China where rapid socio economic development happens together with exploitation and pollution of the natural environment Urban rivers which used to support navigation and provide water resources to humans now suffer from various kinds of ecosystem degradation and thus create threats to regional sustainability This book treats the urban river as an ecosystem which closely relates to and interacts with humans and defines urban river ecosystem health as a requirement at three levels sensorial fitness living water and affinity with humans which emphasizes more on the human oriented needs The evolution processes of urban river ecosystem health protection can generally be divided into four phases demonstrating the relationships between human activities and UREH status as simple balance uncontrolled imbalance continuous interlocking and stable harmony The relationships between typical urban rivers and humans in the Pearl River Delta region China are then analyzed on both regional and local scales and from lateral time longitudinal and spatial dimensions Intensive human activities together with the intrinsic complex and high density river network result in deteriorating water quality changing hydrological conditions and damaging the river ecosystem in this region From the perspective of political ecology various actors in urban river management include governmental agencies business multilateral institutions ENGOs and grassroots actors whose unequal power relations vary over time and space causing conflicts as well as coordination Especially different governmental agencies are engaged resulting into overlap and gap among their functions as well as spatial discrepancy River Chief System as a new practice of urban river management has strengthened the collaboration effect and got success in river pollution control The spatial scale effect of human activities on urban river water quality is examined implying the necessity of adopting a unified management strategy at the buffer zone scale to protect and restore urban river ecosystem health The target audience of this book includes postgraduate students and researchers who have research interests in as well as government officers whose routine is related to water management Urban Ecosystem Justice Scott Kellogg, 2021-09-22 Merging together the fields of urban ecology environmental justice and urban environmental education Urban Ecosystem Justice promotes building fair accessible and mutually beneficial relationships between citizens and the soils water atmospheres and biodiversity in their cities This book provides a framework for re centering issues of justice and fairness in sustainability discourse while challenging the profound ecological alienation experienced by urban residents While the urban sustainability movement has had many successes in the past few decades there remain areas for it to grow For one the benefits of sustainability have disproportionately benefited wealthier city residents with concerns over equity justice and social sustainability frequently taking a back seat to economic and environmental considerations Additionally many city dwellers remain estranged from and unfamiliar with ecological

processes with urban environments often thought of as existing outside of nature or as hopelessly degraded Through a citizen centered lens the book offers a guide to reconciling these issues by demonstrating how questions of equity access and justice apply to the biophysical dimensions of the urban ecosystem soil water air waste and biodiversity Drawing heavily from the fields of urban ecology environmental justice and ecological design this book lays out a science of cities for people a pedagogical platform that can be used to promote ecological literacy in underrepresented urban communities through affordable and decentralized means This book provides both a theoretical and practical field guide to students and researchers of urban sustainability city planners architects policymakers and activists wishing to develop reciprocal relationships with urban ecologies
