Practice and Progress in Social Design and Sustainability Siu, Kin Wai Michael,Wong, Yin Lin,2018-07-06 Designers provide creative solutions for user problems and identify the needs of users in a given environment However it is often difficult to understand the social design of a product or service Practice and Progress in Social Design and Sustainability is a critical scholarly resource that provides groundbreaking research on social contributions to design Featuring coverage on a broad range of topics such as rural sustainability ecological farmhouse designs and community public spaces this book is geared towards architects designers program planners entrepreneurs and engineers seeking information about design for resolving social issues **The Nature of Order: The process of creating life** Christopher Alexander,2002 This four volume work allows the reader to form one picture of the world in which the perspectives from science beauty and grace and commonsense intuitions are interlaced The Nature of Order, Book Two: The Process of Creating Life Christopher Alexander,2020-03-30 Scientifically this is perhaps the most exciting of the four books How do beautiful creations come into being Nature can make an infinite number of human faces each one unique each one beautiful The same is true for daffodils streams and stars But man made creations especially the towns and buildings of the 20th century have only occasionally been really good more often mediocre and in the last 50 years have most often been deadly What is the reason for the difference It hinges on the deep nature of the processes we use Merely understanding the geometry of beautiful and living form the topic of Book 1 is not enough to help us create such a living geometry In the 20th century our society was locked into deadly processes which created our current built environment process that most people were not really aware of and did not question Despite their best efforts and intentions architects and planners working within these processes could not achieve a living built environment Life and beauty in the built world arise only from processes which allow living structure to unfold The secret lies in knowing as nature does what must happen in what order what sequence of events allows a living form to unfold successfully Here in Book 2 Alexander puts forward a fully developed theory of living process He defines conditions for a process to be living that is capable of generating living structure He shows how such processes work and how they may be created At the core of the new theory is the theory of structure preserving transformations This concept new in scientific thinking is based on the concept of wholeness defined in Book 1 A structure preserving transformation is one which preserves extends and enhances the wholeness of a system Structure preserving transformations provide the means for any step by step process social biological architectural or technical to reach configurations which are most profound most

capable of supporting life The process of creation whether in the formation of a single object or in the piece meal aggregation of a town requires this sort of generative process a careful and deliberate sequence of steps in which each step creates the context for the next one and each next wholeness is derived from the previous wholeness Our billions of beautiful and unique human faces come from one class of sequences Driven by these sequences an initial cell differentiates again and again until beautiful and complex human beings emerge infinitely various always harmonious Making changes in society so that streets buildings rooms gardens and towns may be generated by hundreds of such sequences requires massive transformations This book is the first blueprint of those transformations *Decorative Style* Kevin McCloud,1990 Shows forty decorating styles and demonstrates special painting techniques
