The Citrus Industry: Crop protection, postharvest technology, and early history of citrus research in California Walter Reuther, 1967 *Handbook of Fruit Set and Development* Shaul. P Monselise, 2018-01-18 Different phases of fruit development and utilization have been treated in many textbooks reviews and a host of scientific and professional papers This seems however to be the first attempt to bring together case histories of so many different fruits and to present a balanced account of the whole period from set to harvest Postharvest physiology which has been in the centre of the picture in many former books is at the bored line of the subject matter of this book and has not been fully covered except in a few cases For this reason two separate chapters deal with physiological and pathological aspects of fruit life after harvest

Molecular Approaches to Improving Food Quality and Safety Deepak Bhatnagar, 2012-12-06 Conventional food safety and quality research have traditionally dealt with the whole organism or food product either plant or animal or with the microorganisms that associate with these food producing plants and animals at various stages of growth development and maturation However conventional research methods no longer are sufficient to bring about the improvements in quality and safety of foods that are demanded in today's marketplace by increasingly educated and sophisticated consumers Improved quality has generally been thought to mean unblemished products particularly fruits and vegetables and 2 the desired functionality of protein carbohydrates and fats in grain oilseeds and the like to achieve the intended purpose in processing foods for example dough characteristics to make bread or pasta However it also means the year round ready availability of nutritious and appealing choices in all food groups that can be quickly and

easily prepared This promotes optimum nutrition particularly necessary in children the elderly and special needs groups and it allows health conscious consumers to match their calorie intake with individual needs to achieve and maintain desirable body weight *Citrus Fruit* Milind Ladaniya,2010-07-28 Post harvest biology and technology of citrus fruits is gaining importance as the therapeutic value of citrus fruits is realized and supported by the increase in health awareness among the general public This book is the most comprehensive reference on citrus fruit biology biotechnology and quality Basic and applied scientific information is interwoven to serve the researcher marketer scientist nutritionist or dietician With discussions of fruit morphology anatomy physiology and biochemistry and chapters on growth phases maturity standards grades and physical and mechanical characteristics of citrus trees this book provides the foundation for understanding growth harvest and post harvest aspects of these important plants Insect pests and diseases irrigation nutrition and rootstocks are also addressed Provides practical tips for post harvest management Includes all aspects of citrus fruit biology technology and quality evaluation Discusses biotechnological applications and potential fresh citrus fruit quality improvement Evaluates medicinal and therapeutic applications and recent clinical findings Exhaustive glossary included

A. Roberts,G. A. Tucker,2013-10-22 Ethylene and Plant Development documents the Proceedings of the Thirty ninth University of Nottingham Easter School in Agricultural Science held at Sutton Bonington on 26 30 March 1984 The conference was entitled Ethylene and Plant Development and included a workshop organized in conjunction with the Association of Applied Biologists on the Practical control of ethylene in fruit vegetables and flowers This volume contains a mixture of review and research papers thus giving a thorough coverage on the subject The workshop reviewed the practical methods and advantages of either applying ethylene to or removing ethylene from various commercial products The rest of the conference dealt with the more fundamental aspects of ethylene synthesis and action during the developmental processes in which the gas is active Emphasis was particularly placed on the effects of ethylene on gene expression and cell development since advances in these

areas may eventually lead to a more scientifically based control of ethylene levels and action within the plant *Plant Physiology*, 1929

Integrated Processing Technologies for Food and Agricultural By-Products Zhongli Pan, Ruihong Zhang, Steven Zicari, 2019-07-13 Feeding our globally expanding population is one of the most critical challenges of our time and improving food and agricultural production efficiencies is a key factor in solving this problem. Currently, one third of food produced for humans is wasted, and for every pound of food produced, roughly an equal amount of nonfood by-product is also generated, creating a significant environmental impact. In *Integrated Processing Technologies for Food and Agricultural By-Products*, experts from around the world present the latest developments, recognizing that while some by-products have found use as animal feed or are combusted for energy, new technologies which integrate conversion of production and processing by-products into higher value food or nonfood products, nutraceuticals, chemicals, and energy resources will be a critical part of the transition to a more sustainable food system. Organized by agricultural crop and focusing on those crops with maximum economic impact, each chapter describes technologies for value added processing of by-products which can be integrated into current food production systems. *Integrated Processing Technologies for Food and Agricultural By-Products* is a valuable resource for industry professionals, academics, and policy makers alike. Provides production through processing coverage of key agricultural crops for a thorough understanding and translational inspiration. Describes and discusses major by-product sources including physical and chemical biomass characterizations and associated variability in detail. Highlights conversions accomplished through physical, biological, chemical, or thermal methods and demonstrates examples of those technologies.

Biochemistry of Fruit Ripening G.B. Seymour, J.E. Taylor, Gregory A. Tucker, 2012-12-06 It is over 20 years since the publication of A.C. Hulme's two volume text on *The Biochemistry of Fruits and their Products*. Whilst the bulk of the information contained in that text is still relevant, it is true to say that our understanding of the biochemical and genetic mechanisms
