### **Application of Vegetation Science to Grassland**

**Husbandry** W. Krause,2013-11-11 WERNER KRAUSE INTRODUCTION GENERAL COMMENTS ON THIS VOLUME The subject Application of vegetation science to grassland husbandry is not limited by geographical boundaries It is proposed to cover this subject in an internationally applicable work of reference However to avoid omissions it would have to embrace all the diversity of grassland from the Arctic to the Equator The term application requires that the papers contained herein take into account both generally relevant scientific knowledge and the special needs of practical farming The latter are not satisfied solely by the laws of vegetation science the changing effects of the market politics the distribution of wealth and poverty highly developed technology and the continued use of archaic farming methods must all be considered To try to cover all this adequately in one volume of approximately 550 pages is a hopeless task The editor and the authors had to limit themselves to presenting a selection of problems and attempts to solve them with the aim that these examples should indicate how much vegetation science can contribute to grassland husbandry and the scope of this contribution is broadened by the references quoted The arrangement of the sections within this volume does not lend itself to specific suggestions for the management of individual systems However grassland husbandry can expect to obtain from this work an insight into some overall general relationships which could assist the adviser in the formulation of more specific improvement plans

Dove,Daniel M. Kammen,2015-04-24 In an era when pressing environmental problems make collaboration across the divide between sciences and arts and humanities essential this book presents the results of a collaborative analysis by an anthropologist and a physicist of four key junctures between science society and environment The first focuses on the systemic bias in science in favour of studying esoteric subjects as distinct from the

mundane subjects of everyday life the second is a study of the fire climax grasslands of Southeast Asia especially those dominated by *Imperata cylindrica* sword grass the third reworks the idea of moral economy applying it to relations between environment and society and the fourth focuses on the evolution of the global discourse of the culpability and responsibility of climate change The volume concludes with the insights of an interdisciplinary perspective for the natural and social science of sustainability It argues that failures of conservation and development must be viewed systemically and that mundane topics are no less complex than the more esoteric subjects of science The book addresses a current blind spot within the academic research community to focusing attention on the seemingly common and mundane beliefs and practices that ultimately play the central role in the human interaction with the environment This book will benefit students and scholars from a number of different academic disciplines including conservation and environment studies development studies studies of global environmental change anthropology geography sociology politics and science and technology studies

*Seasons of the Grassland Biome* Shirley Duke, 2014-05-30 Grassland biomes are unaltered areas of land where grass is the dominant plant life They are inhabited by grazing mammals ground nesting birds insects and a few species of reptiles This book allows students to learn more about the animals that live in grassland biomes and the dangers posed by human exploitation
