Ohanian, Remo Ruffini, 2013-04-08 The third edition of this classic textbook is a quantitative introduction for advanced undergraduates and graduate students It gently guides students from Newton's gravitational theory to special relativity and then to the relativistic theory of gravitation General relativity is approached from several perspectives as a theory constructed by analogy with Maxwell's electrodynamics as a relativistic generalization of Newton's theory and as a theory of curved spacetime The authors provide a concise overview of the important concepts and formulas coupled with the experimental results underpinning the latest research in the field Numerous exercises in Newtonian gravitational theory and Maxwell's equations help students master essential concepts for advanced work in general relativity while detailed spacetime diagrams encourage them to think in terms of four dimensional geometry Featuring comprehensive reviews of recent

experimental and observational data the text concludes with chapters on cosmology and the physics of the Big Bang and inflation

Cosmology and Gravitation, 1980-10-31 Orion, 2005 **Gravitation and Cosmology: Principles and Applications of the General Theory of Relativity** August Hall, 2023-09-19 Cosmology is a field of astronomy that studies the origin and evolution of the universe General theory of relativity also called Einstein's theory of gravity serves as the foundation for comprehending the history and large scale structure of the universe A number of significant predictions about the physical world such as the Big Bang origin of the universe the existence of black holes effect of gravity on clocks and gravitational lensing are also based on general relativity theory According to this theory numerous astrophysical occurrences produce gravitational waves which are ripples in the geometry of spacetime and these propagate at the speed of light This theory provides a unified description of gravity as a geometric property of space and time also known as the four dimensional spacetime model It also improves upon Newton's law of universal gravitation and generalizes special relativity It serves as the foundation for the fields of relativistic astrophysics and cosmology This book unfolds the principles and applications of the general theory relativity It presents researches and studies performed by experts across the globe The book will help the readers in keeping pace with the rapid changes in this field

Saridakis, Ruth Lazkoz, Vincenzo Salzano, Paulo Vargas Moniz, Salvatore Capozziello, Jose Beltrán Jiménez, Mariafelicia De Laurentis, Gonzalo J. Olmo, 2021-12-10 With a focus on modified gravity this book presents a review of the recent developments in the fields of gravity and cosmology presenting the state of the art highlighting the open problems and outlining the directions of future research General Relativity and the Λ CDM framework are currently the standard lore and constitute the concordance paradigm of cosmology Nevertheless long standing open theoretical issues as well as possible new observational ones arising from the explosive development of cosmology in the last two decades offer the motivation and lead a large amount of research to be devoted in constructing various extensions and modifications In this review all extended theories and scenarios are first examined under the light of theoretical consistency and are then applied in various geometrical backgrounds such as the cosmological and the spherical symmetric ones Their predictions at both the background and perturbation levels and concerning cosmology at early intermediate and late times are then confronted with the huge amount of observational data that astrophysics and cosmology has been able to offer in the last two decades Theories scenarios and models that successfully and efficiently pass the above steps are classified as viable and are candidates for the description of Nature allowing readers to get a clear overview of the state of the art and where the field of modified gravity is likely to go This work was performed in the framework of the COST European Action Cosmology and Astrophysics Network for Theoretical Advances and Training Actions CANTATA *Relativity, Gravitation and World-structure* Edward Arthur Milne, 1935
