

Gravity

- Gravity is a force.
- It is a force which a planet or other body draws objects toward its center.
- It is a force of attraction which exists between two masses.
- The attraction can exist between two bodies, objects, or any particles
- The Earth has gravity so we can walk or stand on the land because it attracts every object towards it.

Mathematical Principles of Natural Philosophy and his System of the World , Sir Isaac Newton's Mathematical Principles of Natural Philosophy and His System of the World Isaac Newton, 1687-01-01 I consider philosophy rather than arts and write not concerning manual but natural powers and consider chiefly those things which relate to gravity levity elastic force the resistance of fluids and the like forces whether attractive or impulsive and therefore I offer this work as the mathematical principles of philosophy In the third book I give an example of this in the explication of the System of the World I derive from celestial phenomena the forces of gravity with which bodies tend to the sun and other planets

Lectures, Essays and Published Articles on Scientific and Literary Subjects and on Foreign Travel C. C. Merriman, 1885 Volume contains 20 collotype plates from photographs of New Zealand South Sea Natives Photomicrographs and two portraits of the author The Lewis Co Boston did the collotype prints This is the only book by this company thus far identified The book notes that only about 600 prints are possible from a matrix and that these prints were polished with talc to bring out the contrast and detail Hanson Collection catalog p 82

Leibniz: Writings on the Metaphysics of the Infinite , 2025-08-29 Gottfried Wilhelm Leibniz 1646 1716 is famous in mathematics predominantly for his invention of the differential calculus and in philosophy for his metaphysics of monads and system of pre established harmony But at the heart of his thinking in both fields lay his profound meditations on the infinite In the 1690s Leibniz was engaged in promulgating his thought on the infinite in both its mathematical and its philosophical aspects On the one hand he had advertised his intention to write a treatise on the Science of the Infinite De scientia infiniti in which he would give an account of the foundations of mathematics On the other he was much occupied in the same years with promoting his own metaphysical system both as the foundation for his new science of dynamics in his revised conception of substance and as a superior alternative to the occasionalism of Malebranche and Sturm The selection of papers presented here should therefore be of great interest to scholars since it contains material relevant to both projects as well as throwing light on their interrelation It consists of twelve texts written by Leibniz in the 1690s and early 1700s none of which has appeared before in English translation Ten of these are translations from new transcriptions made from original Latin manuscripts in the Leibniz Archives in Hanover plus the texts given in Appendices 2 and 4 the remaining two are selections from Leibniz s correspondence with Johann Bernoulli and excerpts from his written interchange with Gabriel Wagner both translated from the Latin text of the Akademie edition Each of the selected papers is accompanied by a detailed commentary explaining its significance for understanding Leibniz s thought including substantial quotations from related sources and situating the text in relation to other writings in the Leibnizian corpus
