**The Concise Atlas of the Stars** Serge Brunier, 2005 An innovative guide to the night sky Most casual stargazers and amateur astronomers have limited time to spend on their hobby Given the choice they would prefer to spend their time viewing stars and constellations rather than trying to find or identify them The Concise Atlas of the Stars uses transparency overlays for the full page images of the night to identify the stars nebulas galaxies and the 15 most interesting constellations Each constellation featured is presented as a full page spread with a transparent overlay Details include Name of the constellation Location luminosity and dimensions of the main stars and most interesting objects Best time of night for observing History and characteristics Map of the constellation and its surroundings Transparency showing the outline of the constellation with its stars Full page night sky photo of the constellation A concealed wire binding allows the book to open flat at any page to keep hands free for adjusting a telescope Attractively illustrated with clear star maps and spectacular photographs this book will be consulted again and again The Concise Atlas of the Stars is an accurate and handy reference to the night sky

[The Photographic Atlas of the Stars](#) H.J.P Arnold, Paul Doherty, Patrick Moore, 1999-05-01 The Photographic Atlas of the Stars contains 50 high quality full color photographs of the entire night sky of the northern and southern hemispheres Each plate is accompanied by a star map of the identical area which identifies the main stars of the constituent constellations as well as other interesting astronomical objects In addition to this detail Sir Patrick Moore has written a commentary for each plate that highlights the stars and objects of interest to observers equipped with binoculars and that includes detailed tabular information on astronomical objects of the region The resulting double page spread provides an invaluable reference for the amateur astronomer detailing the constellations and other heavenly bodies of interest that are observable with the naked eye binoculars or a small telescope
