Monthly Bulletin ,1900 The Pantanal of Poconé Charles W. Heckman,2013-03-14 There are many famous wetlands in the world that have been deemed important for the homeostasis of the biosphere and accorded some form of protected status in view of the richness of their flora and fauna The Pantanal located almost directly in the center of the South American continent is among the largest such wetlands in the world It is in fact the largest wetland that is still in a nearly natural state and has not been extensively modified by man for agriculture The extent of the region covered by flood waters at the end of each rainy season varies from year to year sometimes considerably so estimates of the exact area it occupies have varied enormously The size of the Pantanal has been reported to be between 80 000 km Bonetto 1975 and 250 000 km Tundisi and Matsumura Tundisi 1985 The most commonly accepted estimates at the present time are approximately 130 000 to 140 000 km supported by estimates made from Nimbus 7 satellite observations Hamilton et al 1996 However Por 1995 suggested that the area extending into Bolivia and Paraguay has not been satisfactorily surveyed leading him to accept the figure of 200 000 km as the area of the entire Pantanal including all of its extensions The main reason for the year to year variation in the extent of the flooding is the considerable difference in timing of the rainfall on the watershed
