Coffey, 1992 This volume explores the basic physiological functions of granulocytes their modification by cytokines and the clinical experience with cytokines discussing the specific responses of neutrophils eosinophils basophils and mast cells to individual cytokines Written by more than 60 experts from all over the world *Granulocyte Responses to Cytokines* examines the responses of granulocytes and mast cells to hormones chemotactic peptides and phorbol esters details cytokine effects on morphology micration adhesion phagocytosis degranulation and cytotoxicity against tumour cells and pathogens covers cyclic nucleotide protein kinases G proteins lipoxxygenase and leukotrienes in the regulation of granulocyte functions indicates caution in the use of cytokine therapy for certain leukaemias due to cytokine effects on the growth of malignant cells and presents clinical studies with granulocyte macrophage and granulocyte colony stimulating factors with promising results in treating genetic virus and drug induced granulocytopenias and immunodeficiencies Containing nearly 3900 literature citations *Granulocyte Responses to Cytokines* is a guide for immunologists hematologists oncologists pharmacologists biologists microbiologists and biochemists pathologists internists and graduate level students in these disciplines

Handbook of Targeted Delivery of Imaging Agents Vladimir P. Torchilin, 1995-08-23 This is the first time detailed and updated information on the targeted delivery of imaging agents has been collected into a single handbook This comprehensive volume presents the scientific background together with the latest experimental and clinical data in this fast growing area The *Handbook of Targeted Delivery of Imaging Agents* meets the requirements of the broadest audience including researchers practitioners and students The basic principles of targeted delivery of imaging are presented and discussed together with various imaging agents and different imaging modalities such as gamma imaging MR imaging and CT PET and SPECT imaging The book consists of eight parts and 39 chapters covering all aspects of targeted drug delivery from the imaging theory and chemistry of imaging agents to their experimental and clinical use for targeted visualization of cancer including ovarian prostate colorectal and thyroid cancer cardiovascular atherosclerosis myocardial infarction and thromboses and neurological diseases infection and inflammation sites A special section discusses the targeted delivery of imaging agents into lymph nodes which are often sites of metastases during different malignant diseases Monoclonal antibody based targeted imaging agents are considered together with new approaches involving the use of labeled micelles liposomes and polymer coated particles The book describes the possible application of designer antibodies for the delivery of diagnostic agents including the preparation properties labeling and experimental use of multifunctional antibodies The alternative improvement of antibody directed targeting describes the application of avidin biotin system for the delivery of imaging agents Long circulating blood pool imaging agents are considered as a special group of organ specific pharmaceuticals The latest trends in the synthesis of immunoscintigraphic MR and CT agents are presented This *Handbook of Targeted Delivery of Imaging Agents* is a must have reference for all

those who need to stay abreast of the latest developments in this hot field Cumulated Index Medicus ,1989 **Journal of the National Cancer Institute** ,1993 *Neuropeptides and Immunoregulation* Berta Scharrer, Eric M. Smith, George B. Stefano, 2012-12-06 This book provides an updated overview of a rapidly developing and exciting area of investigation dealing with the role of neuropeptides in immunoregulatory processes Existing texts focus on the bidirectional exchange of signals among the nervous endocrine and immune systems in mammals carried out primarily by the enkephalin and proopiomelanocortin families of neuropeptides and lymphokines This collection of material is the first one to include pertinent information obtained in invertebrates which has considerably advanced our knowledge of the role of opioid neuropeptides especially in another activity of the immune system that of autoregulation The study and interpretation of the remarkable parallelisms between these phenomena observed in invertebrates and vertebrates bring new insight into the mechanisms of neuroimmunobiological integration with both general biological and clinical implications Molecular Immunological Considerations in Malaria Vaccine Development Michael F. Good, Allan J. Saul, 1993-10-13 Some of the world's leading research scientists in the field have contributed to this new book on malaria vaccine development The book examines various strategies being pursued against the different stages of the parasite the sporozoite asexual erythrocytic stages and sexual stages It describes vaccines that combat the parasite directly vaccines aimed at preventing disease vaccines based on attenuated parasites and vaccines based on small carefully defined synthetic peptides The book provides a compendium of current approaches lists of preferred antigens and the results of vaccine trials to date Molecular immunology involved with both the natural immune response to parasites and with the constraints on inducing immunity are emphasized throughout the book Views on how vaccines may be tested and then integrated into malaria control programs are also discussed Molecular Immunological Considerations in Malaria Vaccine Development will be useful for researchers and students in immunology parasitology biotechnology vaccine design and tropical and public health **Signal Transduction in Leukocytes** Pramod M. Lad, John S. Kaptein, Ching-Kow Lin, 1995-11-27 *Signal Transduction in Leukocytes* presents important principles and various aspects of cellular regulation in leukocytes The book discusses receptor structure and signaling emphasizing cytokine receptors and the T cell and B cell antigen receptors It investigates the role of the heterotrimeric G proteins and small G proteins as transducers Authorities in each field cover a wide range of topics They explore propagation of signaling cascades through second messengers and serine threonine kinases the initiation of signaling from the B and T cell antigen receptors by tyrosine phosphorylation and protein recruitment and the role of signaling in cell cell interactions and the regulation of the cell cycle The book outlines the relationship of receptor signaling to inflammatory reactions of neutrophils eosinophils and macrophages **Mast Cells and Basophils** Gianni Marone, Lawrence M. Lichtenstein, Federica J. Galli, 2000-05-25 *Mast Cells and Basophils* will be essential reading for immunologists biochemists and medical researchers Detailed chapters cover all aspects of mast cell and basophil research from cell development

Dvorak,Rita A. Monahan-Earley,1995-06-19 Diagnostic Ultrastructural Pathology Volume III presents individual problem based cases in a well illustrated format using numerous electron micrographs to convey appropriate and necessary visual information for the diagnosis of human disease The format facilitates the teaching of the case approach for diagnostic ultrastructural pathology using clinical ultrastructural pathologic correlation These guides illustrate key reasoning processes that physicians use to resolve individual clinical problems through the use of electron microscopy The material is useful to a wide variety of physicians and students of medicine structure and disease at various levels of training as well as in the training of and operational use by technical support staff The two volumes include a total of 50 cases and a procedural guide for the ultrastructural pathology laboratory The cases were selected using four principal criteria 1 classic cases which are diagnosed readily by light microscopy to facilitate the electron microscopic diagnosis of less classic cases 2 diagnostic cases for which ultrastructural analysis is essential for diagnosis 3 supportive cases where either the light or the electron microscopic diagnosis is supportive and thus confirmatory of the other and 4 new facts cases which establish new knowledge regarding the pathogenesis of disease using electron microscopy as the investigative modality The 50 cases are grouped anatomically in four major categories Volume III presents the cases dealing with the endocrine and hematopoietic systems Each section is preceded by introductory remarks Each case cites relevant classic anatomic pathology papers and related research papers These volumes also include multiple functional indices providing ready access to the material from several starting points

There are separate indices for presenting symptoms differential diagnostic groups ultrastructural pathology criteria and final diagnostic categories As a valuable resource and guide Diagnostic Ultrastructural Pathology Volume III is an excellent high quality addition to the field of diagnostic pathology *Tumor Immunology and Cancer Therapy* R.
